DIGITAL FLASH-CUT APPLICATION FOR
TV TRANSLATOR STATION K17GT (FACILITY ID 128241)
PRICE, UTAH
CH 17 0.03 KW (MAX-DA)

Technical Narrative

This Technical Exhibit supports a flash-cut application for TV translator station K17GT. Station K17GT is operating on analog channel 17 with a directional antenna maximum (visual) effective radiated power (ERP) of 0.38 kilowatts and an antenna height above mean sea level (RCAMSL) of 2934 meters (BNPTT-20000831AUI).

Summary of Proposed Facilities

Below is a tabulation of the proposed paired digital facility:

Channel:	17
Geographic Coordinates:	39° 31' 47" North Latitude 111° 03' 04" West Longitude
Antenna Structure Registration:	N/A
Overall Tower Height:	45 meters
Ground Elevation:	2894 meters
Radiation Center:	2934 meters AMSL 40 meters (130 feet) AGL
Antenna Type:	Scala 4DR-4-2HW (6.0 dBd)
Antenna Major Lobe Orientation:	85° True
Transmitter Power Output:	10 Watts
Emissions Mask:	Stringent
Transmission Line:	LDF5-50A (7/8" Foam – 150 feet)
Maximum Effective Radiated Power:	0.03 kilowatt

Allocation Considerations

A study has been conducted to assure that the proposal will not create prohibited interference with other licensed, authorized or pending analog or digital TV, LPTV/translator and Class A TV stations. Using the procedures outlined in the FCC's OET-69 Bulletin, a 1 kilometer cell size resolution and 1990 U.S. Census, the proposal complies with the current FCC policy (i.e., less than 0.5% new interference caused to other pertinent assignments). If necessary, a waiver of the FCC rules is respectfully requested based on use of the procedures outlined in the FCC's OET-69 Bulletin to the remaining LPTV/translator stations.

The applicant recognizes the proposal is secondary to authorized full-service analog and DTV operations. The applicant understands that it must correct and/or eliminate prohibited interference that may result from its proposed operation.

Radiofrequency Electromagnetic Field Exposure

The proposed K17GT facilities were evaluated in terms of potential radio frequency (RF) energy exposure at ground level to workers and the general public. The radiation center for the antenna is located 40 meters above ground level. The proposed maximum ERP is 0.03 kilowatt. Based on a conservative downward relative field value of 0.5, the calculated power density at ground level will not exceed 0.0002 mW/cm^2 or less than 5% of the FCC's recommended limit of 0.33 mW/cm^2 for channel 17 for an "uncontrolled" environment.

Access to the transmitting site will be restricted and appropriately marked with warning signs. In the event that workers or other authorized personnel enter restricted areas or climb the tower, appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure. Such measures include reducing the average exposure by spreading out the work over a longer period of time, wearing "accepted" RFR protective clothing and/or RFR exposure monitors or scheduling work when the stations are at reduced power or shut down.

It is noted that this statement only addresses the potential for radiofrequency electromagnetic field exposure.
