

FCC form 302 Amended DTV Application for License
Explanation for Deviation from Construction Permit

The construction permit terms have been deviated from in that a 16 bay omnidirectional antenna was erected in place of the originally planned 8 bay omnidirectional antenna. The radiation patterns of the 8 bay and the 16 bay antenna are identical and the radiation center of the 16 antenna is within the allowable limits of being at the same height above ground level as the originally proposed 8 bay antenna. Engineering data in this application has been adjusted to show a lower power output from the transmitter to achieve the authorized ERP as set forth in the Construction Permit.
