

**Technical Statement**  
**Application for Construction Permit**  
**W231BP Chester, NY**  
**January, 2009**

This technical statement is prepared by Charles Williamson, president of Digital Radio Broadcasting, Inc., licensee of W231BP at Chester, NY. This application serves two purposes: (1) specify a different power level and (2) specify a different directional antenna.

It should be noted the facility as proposed will show interference to W231AG at Newburgh, NY. An application is being filed to relocate that facility to a different site and different channel, thereby eliminating the interference noted in the study. It is expected grant of this construction permit will be conditioned on the licensing on W231AG at its new location and channel, therefore eliminating any chance of interference.

The translator facility is located at an established remote mountaintop communications site. The elevation is compliant with 74.1235 pertaining to Power Limitations since the maximum Effective Radiated Power will not exceed 10 watts.
