

Application is a minor modification, application purpose as follows:

- Channel change from 294 to 230 to reduce 1<sup>st</sup> channel interference in West Phoenix Metro
- Physical move to a secure radio site that can provide reliable power, security and environmental protections.
- Channel 294 will not meet spacing criteria for proposed site.

We respectively wish to transition as quick as possible to file license to cover and release channel 294 back into the available channel pool for the upcoming October 2013 LPFM filing window so another candidate licensee may have an opportunity.

Thank you
