May 8, 2006

Reference: KKL B ELGIN TOWER SITE, SITUATED SOUTHEAST FROM THE TOWN OF ELGIN, IN BASTROP COUNTY, TEXAS.

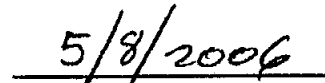

On May 8, 2006, The Rippy Surveying Company observed the orientation of the radio antenna in the field at the above referenced tower site which is east of F.M. 1704, east of Lower Elgin Road and southeast of Tanglewood Cove in Bastrop County, Texas.

The Rippy Surveying Company observed the direction of the radio antenna relative to the three constructed guy anchor wires found attached to the tower on the ground. The guy anchor wires are shown on exhibit plat 1-A, prepared by Fisher Surveying, P.O. Box 1197, Van, Texas 75790, Phone 1 (903) 963-3524 and signed and sealed by Dale R. Fisher, Registered Professional Land Surveyor and entitled "KKLB ELGIN TOWER SITE". The Fisher exhibit plat 1-A shows three guy anchor wires that are labeled with true bearings. The Rippy Surveying Company adopted the bearing basis of the Fisher exhibit plat 1-A, and observed that one of the antennas was directed toward a true bearing of South 20 degrees East (same direction being a north azimuth of 160 degrees) relative to the Fisher exhibit plat 1-A guy anchor wires as constructed as located on the ground by The Rippy Surveying Company, Inc..

Please contact me at 301-0011 if I can further assist you.

I declare under penalty of perjury that to my knowledge that the foregoing is true and correct.
