

**NEW 280C1, WELLS, NV****EXHIBIT 22 – NARRATIVE****ENGINEERING STATEMENT**

Airen Broadcasting Company (“ABC”) is an applicant in FM Auction 62 for a new FM broadcast station at Wells, Nevada (BSFH-20050810ACC, Facility ID 166019; see Attachment A to the relevant Public Notice, DA 05-1598, page A-3, FM092). Staff has determined ABC to be the winning bidder for this permit, and ABC is therefore required to submit a complete 301-FM. The instant application is a response to that requirement.

Exhibit 23 is a contour map of the community coverage from the ABC proposal, showing that the proposed 70 dBu contour covers the entire community of license (2000 Census, block data; contours calculated pursuant to 47 CFR §73.313). The ABC proposal clears the coordination distances to both international borders and all monitoring stations and radio observatories.

Exhibit 25 contains the interference study list, showing that the ABC proposal clears all other records in the database.

ABC affirms that it will locate the studio in accordance with 47 CFR §73.1125. Exhibit 30 contains a radio frequency radiation study of the ABC proposal, showing that it meets the requirements of 47 CFR §1.1310 and OET 65A. No other environmental impacts are known to exist from this proposal. ABC affirms that it will cease transmission as necessary to prevent RF exposure to workers in excess of the regulation.

The above and attached information is true and correct as to my knowledge and belief.
