

AM ANTENNAS/TOWERS 73.316(e)

A check of the Commission's database on June 3, 2005 indicates there are no AM radiators/stations within 3.2 km of this location.

ENGINEER QUALIFICATIONS 73.316 (c)(vii)

My qualifications are 30 plus years of experience, not only in broadcast, but in general communications, to include preparation of application engineering data, licensing requirements, hands on installation and resolving of deficiencies. I have worked with directional antenna systems before and am familiar with Section 73.316 of the Commission's Rules. During the 1980-1990 period I owned and operated a Radio Common Carrier for which I performed all of my own engineering, licensing and maintenance (KKB493). I spent 20 years in the military part of which time I was a Communications Chief for a Combat Engineer Battalion. I am also a licensed amateur radio operator (NOJWL-General Class) and served as the Emergency Coordinator for amateur radio for the State of Missouri. I have submitted documentation to the Commission previously for this and other clients. This documentation has been accepted. If the Commission desires or requires any further information it will be made readily available.
