

ENGINEERING STATEMENT

THE BOARD OF EDUCATION OF SOUTHFIELD APPLICATION FOR CONSTRUCTION PERMIT WSHJ-FM CHANNEL 202A - SOUTHFIELD, MICHIGAN

Background

The Board of Education of Southfield has retained the services of The XMOD Company to prepare the engineering documentation in support of an application for construction permit for WSHJ-FM CH202A (Facility ID#: 65449). The applicant proposes to relocate the transmitting antenna from an existing guyed tower to an adjacent self-supporting tower. The change in location is 0.02 kilometers at 304 degrees true.

This engineering statement describes the proposed changes and discusses aspects of the application that require further explanation.

Present Transmitter Site

The coordinates (NAD-27) of the present licensed tower site are:

42-28-12.0 North Latitude
83-15-50.0 West Longitude

The height of the antenna radiation center is 31 meters AGL, 232 meters AMSL and 13 meters height above average terrain.

Proposed Transmitter Site

The coordinates (NAD-27) of the proposed tower site are:

42-28-12.4 North Latitude
83-15-51.6 West Longitude

The height of the antenna radiation center is 39.4 meters AGL, 237 meters AMSL and 21 meters height above average terrain (See Exhibit E1).

The distance between the antenna sites is 0.02 km (70 feet) @ 304 degrees.

Predicted Interference Contours

A Channel Study was conducted to identify licensed and applications that need to be addressed because if the proposed change to the facility (See Exhibits E2 and E3). Exhibit E-2 is a Channel Study based on the present licensed facility with an effective radiated power (ERP) of 0.125 kW at 232 meters height above mean sea level (HAMSL) and Exhibit E2 is a Channel Study based on the proposed facility with an ERP of 0.120 kW at 237 meters HAMSL.

The Board of Education of Southfield
Application for Construction Permit
WSHJ-FM, Southfield, Michigan

There will be a small increase of the predicted coverage area to the South of the site because of the 5 meter increase in height AMSL and terrain variations along study radials.

CIMX-FM Study (Facility ID #94688)

The WSHJ-FM tower site is 24 km from the US/Canadian border. CIMX-FM CH204C1, Windsor, Ontario (Facility ID #94688) operated with an ERP of 100 kW at 176 meters HAAT. The CIMX-FM 60 dBu F(50,50) protected contour overlap the WSHJ-FM CH202A service area. The WSHJ-FM CH202A predicted 80 dBu F(50,10) interference contour to second adjacent CIMX-FM CH204C1 facility falls completely within the US (See Exhibit 21). Therefore, the proposed facility is in compliance with provisions of the Working Agreement for Allocation of FM Broadcast Stations on Channels 201-300 under the Canada-United States FM Agreement of 1947.

WBFH-FM CH201A Study (Facility ID#: 5872)

WBFH-FM CH201A is 12.2 km at 351.4 degrees from the proposed site. The reduction in the proposed ERP from 0.125 kW to 0.120 kW will maintain the distance to the predicted interference contour in the direction of WBFH-FM as noted in Channel Studies E2 and E3. Exhibit 17 depicts the overlap area.

TV Channel 6 Protection Study

The Rules and Regulation Section 73.525 require a study of TV Channel 6 facilities within 257 km of a non-commercial educational (NCE-FM) station on Channel 202. WLNS-TV6, Lansing, MI (Facility ID#: 74420) operates with an ERP of 100kW @305m HAAT, CIII-TV Paris, Ontario (Facility ID#: 98651) operates with an ERP of 100kW @316m HAAT and an application (Facility ID#: 97070) for Channel 6 in Windsor, Ontario (0.56kW @0m HAAT) are within 257 km of the WSHJ-FM site.

WLNS-TV6, Lansing, MI Study (Facility ID#: 74420)

There will be no change in interference to WLNS-TV6 because of the proposed reduction in the ERP. The presence of existing predicted interference within the 47 dBu F(50,50) contour of WLNS-TV6 from CIMX, CH204C1, Windsor, Ontario is depicted in Exhibit 18. The WSHJ-FM CH202A predicted interference area to WLNS-TV6, Lansing, MI is within the predicted interference area of CIMX-FM CH204A, Windsor, ON. The predicted interference area is outside of the WLNS-TV6 Grade A, therefore, Exhibit 18 includes the adjustment of 6 dB for a portion of the WSHJ-FM and all of the CIMX-FM interference calculations as described in FCC Section 73.525 Paragraph (e)(1)(iii).

The Board of Education of Southfield
Application for Construction Permit
WSHJ-FM, Southfield, Michigan

CIII-TV6, Paris, ON Study (Facility ID#: 98651)

The CIII-TV6 facility is 247 km @068 degrees from the WSHJ-FM site. The distance to the WSHJ-FM 80 dBu F(50,10) contour is 2.4 km. The distance to the 47 dBu F(50,50) contour is 105 km. Therefore, there is no predicted interference to the CIII-TV6 protected service area because the predicted contours do not intersect.

South Western Ontario B/Casting, Inc., Windsor, ON Study (Facility ID#: 97070)

The proposed Windsor facility is 25 km @133 degrees from the WSHJ-FM site. The distance to the WSHJ-FM 80 dBu F(50,10) contour is 2.4 km. Assuming a height above ground level of 32 meters for the proposed Windsor facility, the distance to the 47 dBu F(50,50) contour is 18.6 km. Therefore, there is no predicted interference to the proposed Windsor facility because the predicted contours do not intersect.

FAA Considerations

The applicant proposes a structure with an overall height of 144 feet (43.9 meters) above ground level (AGL). The structure is less than 200 feet (61 meters) AGL, is within the city limits of Southfield and shielded by surrounding structures. Therefore, no notification of the FAA is required pursuant to present Part 77 requirements and no antenna structure registration is required.

Environmental Considerations

A grant of this application would be deemed to have no significant effect on the quality of the human environment. It is also excluded from environmental processing pursuant to the provision of Section 1.1307(b).

The relocation of the proposed facility involves the use of the existing antenna mounted on the side of an existing structure, which does not correspond to any of the types of facilities specified in Section 1.1307(a).

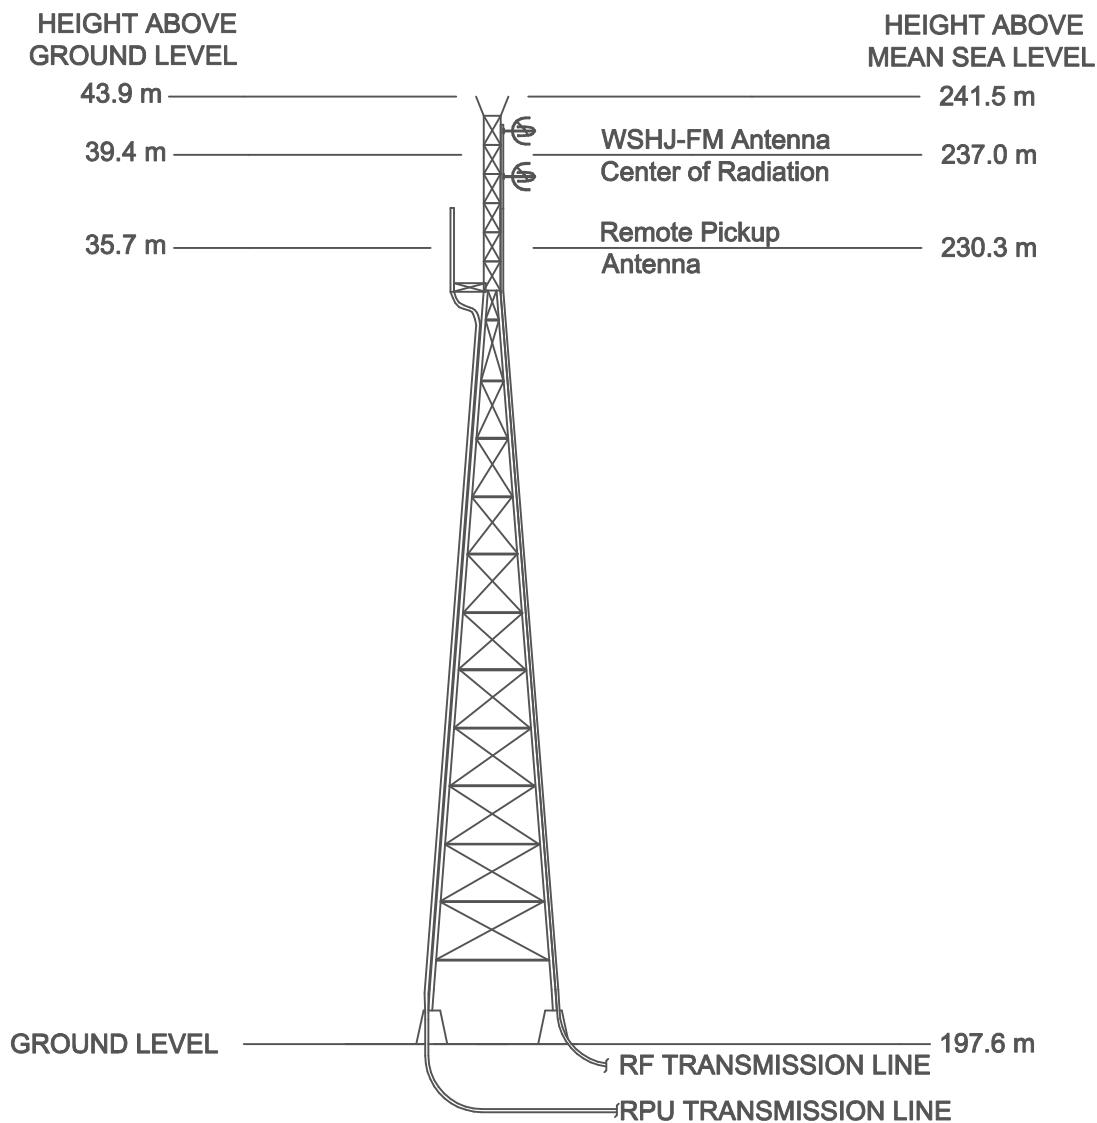

The power flux density at 2 meters above ground level is predicted to be less than 0.005 milliwatts per centimeter squared. This level is approximately 15 dB below the specified maximum permissible exposure (MPE) of 0.2 milliwatts per centimeter squared for general population/ uncontrolled space and approximately 22 dB below the MPE of 1.0 milliwatts per centimeter squared for worker/controlled space. Therefore, at ground level there is no potential for human exposure in spaces with general population/uncontrolled access and occupational/controlled worker access to exceed the FCC MPE limits. There are

The Board of Education of Southfield
Application for Construction Permit
WSHJ-FM, Southfield, Michigan

no nearby terrain features or structures having public or worker access which would exceed the MPE in the main beam of the antenna.

The base of the tower will be fenced to control worker and public access to the tower structure. There is, however, a potential for workers on the structure and in the vicinity of the antenna to be exposed to high RFR levels when the station is in operation. Worker exposure will be mitigated through proper instruction and signage. When any worker will be in the vicinity of the antenna elements, the station will cease operation. Procedural policies will be instituted to prevent accidental energizing of the transmitter/antenna while a worker is on the structure in a hazardous area.

WSHJ-FM SELF-SUPPORTING TOWER
