

## **Radio Frequency Radiation Study and Statement**

The Proposed combined facilities of WQRV and WDRM were evaluated in terms of potential radio frequency radiation exposure at ground level in accordance with OET Bulletin No. 65, "Evaluating Compliance With FCC-Specified Guidelines for Human Exposure to Radio frequency Radiation."

The proposed antenna system is an ERI type SHPX-6AC6-SP, 6-bay, full wave spaced antenna, mounted with its center of radiation 172 meters above ground level, and will operate with a combined effective radiated power of 108.5 Kilowatts in both the horizontal and vertical planes. At 2 meters above ground, at 54 meters from the base of the tower, this proposal will contribute worst case, 17.12 microwatts per square centimeter, or 1.712 percent of the allowable ANSI limit for controlled exposure, and 8.56 percent of the allowable limit for uncontrolled exposure. It is therefore believed that this proposal is in compliance with OET Bulletin Number 65 as required by the Federal Communications Commission.

Further, the applicant will see that signs are posted in the vicinity of the tower, warning of potential radio frequency hazards at the site. The site itself is restricted from public access. The applicant will cooperate with other users of the tower to reduce power of the facility, or discontinue operation, as necessary to limit human exposure to levels less than specified by the Federal Communications Commission should anyone be required to climb the tower for maintenance or inspection.
