

# **EXHIBIT 12**

Prepared by Guy Smith in connection with application for  
Digital Companion KJTV-LD, Ch. 33, Lubbock, TX

## **ENVIRONMENTAL CONSIDERATIONS**

The proposed construction will not have a significant environmental impact. The proposed antenna is to be mounted on a new tower in close proximity to an existing tower of nearly the same height. Calculations of RF Radiation levels have been performed in accordance with OST Bulletin No. 65, Edition 97.1, dated August 1997, for all planned radiation sources on both towers. The total contribution from the proposed new station, at any accessible point in the vicinity of the tower, other than on the tower, is well below 0.2% of the permissible exposure level for the general public. This proposed facility is therefore categorically excluded from consideration under section 1.1306.

Policies are in place at Ramar Communications II, Ltd. to reduce power and / or shut down transmitters as necessary in order to avoid exposure of workers on the tower to RF levels in excess of ANSI guidelines.
