

Amendment to pending application

The proposed translator will be at an existing communications site, FCC Tower Registration 1011586.

The original application was filed on August 6, 1997. The site owner at that time, Diablo Communications, had the site coordinates specified as 36-12-20 / 121-06-50 (NAD 27). On January 8, 1997, Diablo Communications filed for Tower Registration (1011586) specifying the same coordinates (NAD 83 36-12-20 / 121-06-54), with a ground elevation of 115.9 meters and tower AGL height of 51.8 meters.

Since the filing of the original translator application, the Tower Registration site coordinates, ground elevation, tower height, and tower type have been modified several times. Currently Tower Registration # 1011586 specifies site coordinates 36-12-22.5 / 121-06-52.9 (NAD 83) 36-12-23 / 121-06-49 (NAD 27), ground elevation 116.0 meters, and tower AGL height 36.9 meters.

It was also discovered that the original translator application filed in 1997 had an error in the site elevation in that the elevation listed as 380 meters is actually the site elevation in feet, and the correct elevation in meters is 116.0 meters. Therefore, the application is being amended to match the correct site coordinates and tower AGL height as listed in the tower registration, and also to correct the site elevation and corresponding antenna COR AMSL. This correction also results in a change in the ERP, as the correct HAAT's allow for an ERP of .250 kW. This also slightly changes the 60 dBu coverage. These changes however do not affect the proposed translator's relationship to other broadcast facilities.

Included in this amendment is an amended Exhibit 12 containing the above corrected information.
