

## EXHIBIT 11

This narrative exhibit is submitted to demonstrate that the instant proposal fully complies with the interference criteria set forth in Section 74.1204 of the Commission's rules. Attached at exhibit 12 are a spacing study and maps demonstrating clearly that there is no prohibited overlap between this proposal and any other FM services. The attached FM spacing study demonstrates that this proposal would be fully spaced even as a full power Class A FM station to all but two other FM facilities. It should be noted that WCDW, 100.5 mHz, Susquehanna, PA does not require contour protection as it is the primary station to be rebroadcast. The attached maps demonstrate that there is no prohibited contour overlap between this facility and the instant proposed FM translator facilities. As demonstrated in these maps no prohibited overlap with these stations is predicted.

The two facilities that have been included on the attached maps are: WCDO-FM, 100.9, Sidney, NY (60 dBu contours to proposed 40 dBu interference contour) and WPGI, 100.9, Horseheads, NY (60 dBu contour to prop. 40 dBu int. contour).

A scale of kilometers has been included on the maps. These maps were drawn to scale using the rfSoftware series of computer programs.
