

**KSL-DT, Salt Lake City, Utah
FCC Form 302-DTV
Section III, Question 5
December 2003**

Exhibit 7

The KSL-DT facility was constructed in accordance with the underlying construction permit (FCC File No. BXPCDT-20021003ABU). During the course of construction, however, the site for the KSL-DT auxiliary antenna was resurveyed. The survey results indicate that the coordinates for the KSL-DT auxiliary antenna are slightly different (less than 3 seconds) from the coordinates authorized on the construction permit. Under Section 73.1690 of the Commission's rules, applicants may correct authorized geographic coordinates less than 3 seconds latitude and/or 3 seconds longitude by filing an FCC Form 302. The difference in coordinates in this instance is less than 3 seconds. Accordingly, applicant, by this application, covers the underlying construction permit (FCC File No. BXPCDT-20021003ABU) and corrects the coordinates at the transmit site. Applicant respectfully requests that the license reflect the following coordinates: North Latitude: 40 deg 39 min 35.2 sec; West Longitude: 112 deg 12 min 04.7 sec. Applicant has filed a notification and aeronautical study (File No. 2003-ANM-2275-OE) with the FAA to change the coordinates and will amend its antenna structure registration once a determination of no hazard has been issued.
