

LPFM preclusion study 105.1, Corpus Christi, TX. Rather than treat the entire Corpus Christi market, point by point, this exhibit will show the entire grid is ineligible for LPFMs on each of the frequencies affected - 104.9, 105.1 and 105.3.

104.9 - The entire grid (The Green Rectangle) is located within the prohibited contour of 104.9 due to being co-channel to KMIQ (The red line). Accordingly, the application does not preclude any opportunity on 104.9.

105.1 - The entire grid (The Green Rectangle) is located within the prohibited contour of 105.1 due to being 1st adjacent to KMIQ (The yellow line). Accordingly, the application does not preclude any opportunity on 105.1.

105.3 - The entire grid (The Green Rectangle) is located within the prohibited contour of 105.3 due to being 1st adjacent to KLHB-FM (The white line). Accordingly, the application does not preclude any opportunity on 105.3

Based on this information, no available LPFM licensing points are precluded by the granting of this application and it should qualify as grantable.
