

This minor amendment application specifies changes to Section III-A-Engineering Tech Box as follows:

1. Channel change to 223
2. Primary Station change to KRLE, Carbon Hill, AL (Facility ID 91901)

The Tuscaloosa application for Channel 221 is included in FM Translator Mutually Exclusive Applications group 8. This minor amendment proposes to move to second adjacent Channel 223 which will provide a technical resolution resolving all mutual exclusivities between the Tuscaloosa application and the other application in MX group 8 (20030317GMF, Facility ID 138815, Channel 221, Tuscaloosa, AL)

Application 20030317GMF for Channel 221 is proposing an increase in ERP to .250 kW resulting in the Tuscaloosa application on second adjacent Channel 223 being located within the 60 dBu contour of Application 20030317GMF. There is no population within the predicted interference area. The Tuscaloosa application will also be located within the 60 dBu contour of second adjacent WTUG-FM, Channel 225, Northport, AL, however, there is no population within the predicted interference area.

No Preclusion Study is required as the proposed translator specifies a transmitter site that is not within 39 km of any Spectrum Limited or Spectrum Available defined market and thus will not preclude any LPFM licensing opportunities.
