

EXHIBIT 4

RE: Request for STA for **KFRG(FM)** FAC. ID. 1241, San Bernardino, CA.

To Whom It May Concern:

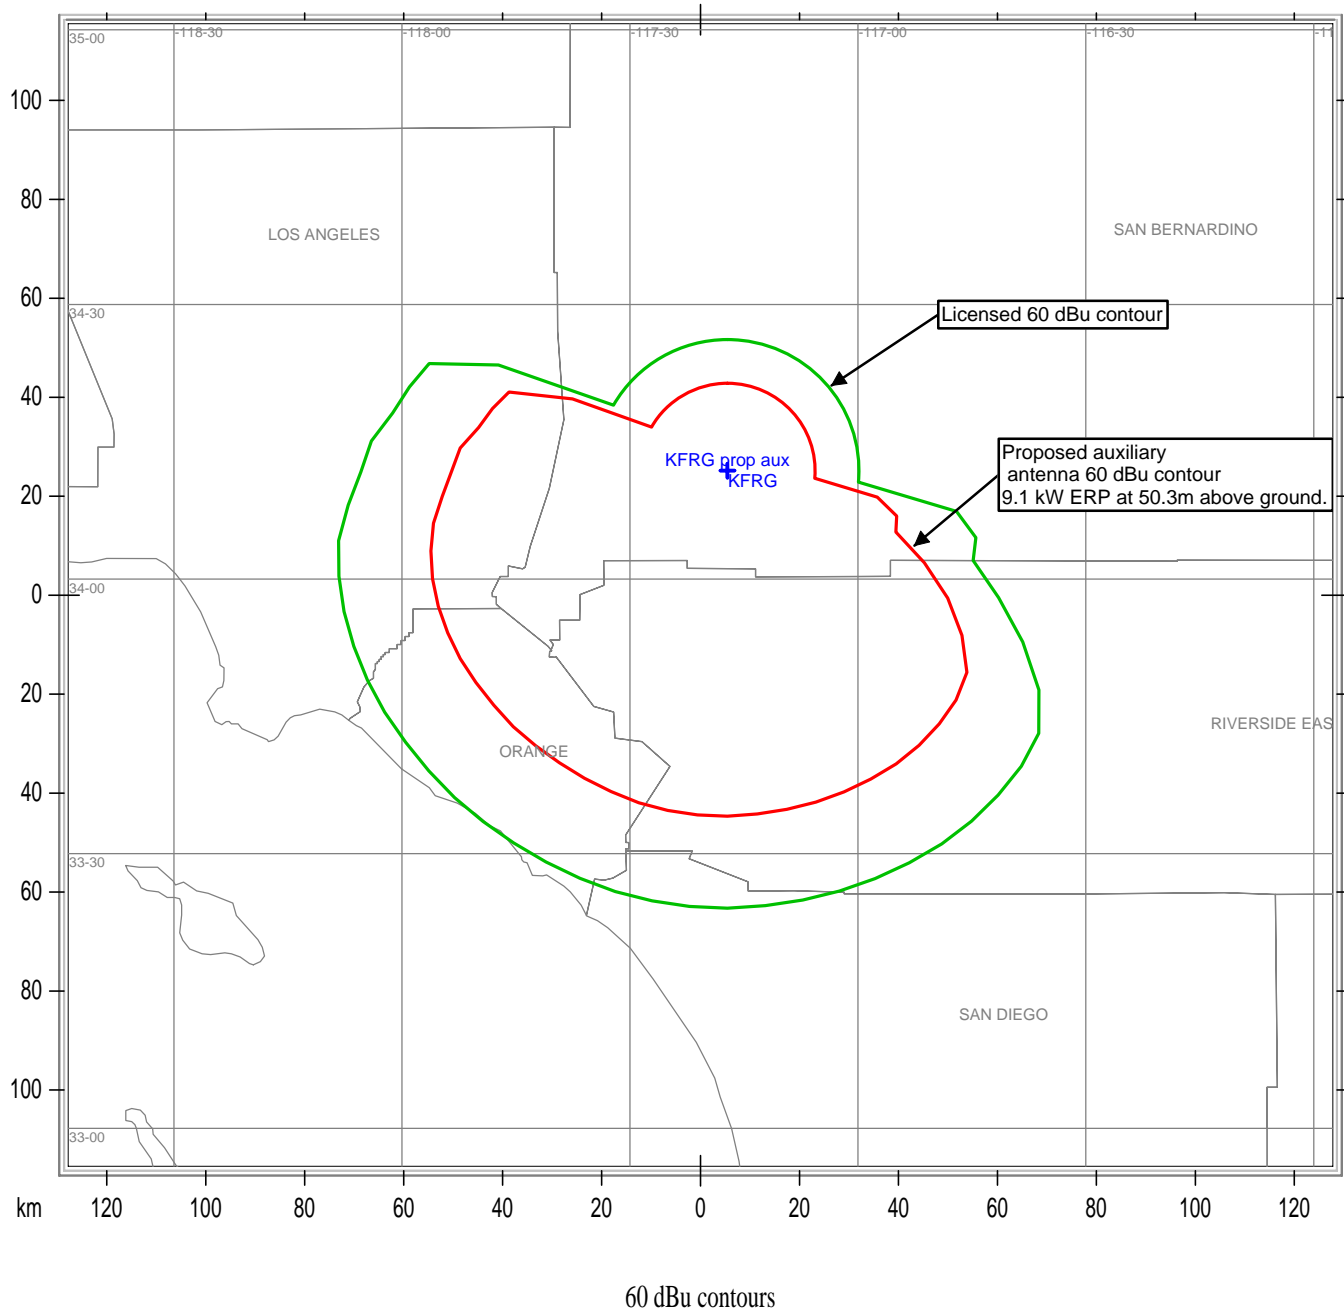

Pursuant to §73.1680 of the Commission's rules, CBS Radio Stations Inc. ("CBS"), hereby requests an STA for its station KFRG(FM) to operate from a temporary antenna pending repairs to the main transmission line. The main licensed facility was damaged as a result of the recent wild fires in southern California.

KFRG is presently operating from its licensed antenna at reduced power (approx. 8.9 kW ERP) pending repairs to its transmission line. During the replacement of the main transmission line, it will be necessary to operate from a temporary antenna on the same tower as the licensed main KFRG antenna. It is proposed to operate with an effective radiated power of 9.1 kW at a center of radiation 50.3 meters above ground (135 m. HAAT). A proposed 60 dBu contour plot is attached illustrating that the proposed temporary 60 dBu contour will not exceed the KFRG 60 dbu licensed contour.

CBS will notify the Commission upon restoration of full power operation from its licensed main antenna.

The proposed transmitting facilities will comply with the FCC guidelines limiting human exposure to radio frequency energy. If work is done on the tower in an area where over exposure could occur, the Licensee in coordination with the other users will take necessary action to prevent the overexposure of workers on the tower including reducing the transmitting power or ceasing operation completely. An Environmental Assessment is not required, as grant of this application would not be considered a major environmental action.

KFRG(FM) Proposed Auxiliary Antenna (revised 11/15/2007)
