Declaration

I declare, under penalty of perjury, that I am a technical consultant to broadcasting and other communications systems, that I have over twenty-five years of experience in the engineering of broadcast and other communications systems, that I am familiar with the Federal Communications Commission's Rules found in the Code of Federal Regulations Title 47, that I am a Professional Engineer registered in North Carolina, that I have prepared or supervised the preparation of the attached Exhibit 18, Allocations, for Spirit Broadcasting Group, Inc., and that all of the facts therein, except for facts of which the Federal Communications Commission may take official notice, are true to the best of my knowledge and belief.

Narrative

This Exhibit provides details of the allocations for the proposed modified facilities of WKBR-FM, at Summerville, South Carolina. The authorization file number is BNPED-20071015AKQ, currently at Branchville, South Carolina. This proposal complies fully with the requirements of 74 C.F.R. 73.509. The change of community is described in a separate exhibit.

The changes are a new site, increased height, increased effective radiated power, and a new directional antenna pattern. This application is being filed in coordination with a modification application for new station WAGP, Beaufort, South Carolina. The licensee of WAGP, Community Broadcasting Corp. of Beaufort, Inc., has filed a minor modification application, file number BPED-20130306ABM. This WKBR-FM application is contingent upon the grant of the WAGP modification.

Allocations

This application proposes service to Summerville, South Carolina, on channel 205 as a Class C1 facility. The Allocations Table in this exhibit provides a list of the stations, construction permits, allocations, and applications studied. All are protected by this application with the exception of the licensed WAGP facilities. The facilities in this application are contingent upon grant of application BPED-20130306ABM, a coordinated application.

An Allocations Study is included as Figure 1. Where there are facilities whose overlap is less than 3.2 kilometers (2 miles) additional figures are provided, along with the output tables from the computer program FMOVER. Those facilities are identified below.

Figure/Table	Facility ID	Community	Channel and Relationship
2	WSCI	Charleston, South Carolina	207C second adjacent
3	WAGP.A	Beaufort, South Carolina	204C1 first adjacent
4	WNSC-FM	Rock Hill, South Carolina	205C1, co-channel
5	WLJK	Aiken, South Carolina	206C1, first adjacent

Modified WAGP Facilities

The proposed modification of WAGP facilities is limited to a change in the directional antenna pattern. The proposed modified WAGP antenna pattern requires no change in the installed WAGP antenna. While the installed antenna reaches 89.4% of the licensed pattern now, it can reach 95.1% of the proposed modified pattern. On Figure 1, the Allocations Study, the licensed WAGP pattern is shown, as well as the modified pattern. The proposed modified pattern and the licensed pattern are included as Figures 6 and 7 of this exhibit.

Directional Antenna

This application proposes a directional antenna. The pattern is tabulated and plotted as Figure 8 in this Exhibit. The antenna will comply with the requirements of §73.316. A

complete updated proof of performance from an antenna manufacturer will be provided in the license application.

The antenna will be mounted to the tower as specified in the manufacturer's mounting instructions. The antenna will not be mounted on the top of an antenna tower which includes a top-mounted platform larger than the nominal cross-sectional area of the tower in the horizontal plane. No other antenna of any type will be mounted on the same tower level as a directional antenna, and that no antenna of any type will be mounted within any horizontal or vertical distance specified by the antenna manufacturer as being necessary for proper directional operation. Antenna installation will be supervised by an engineer experienced in directional antennas. The supervising engineer will provide a statement of qualifications and a statement that the antenna was assembled and installed according to the manufacturer's instruction. A registered land surveyor will verify the orientation of the antenna and provide a statement that the antenna is properly oriented. There are no other FM or TV broadcasting antennas within 60 meters of the proposed site. There is an existing AM station 3.2 kilometers from the existing and proposed site.

Source of Data

Transmitter location, effective radiated power, directional antenna pattern, and elevation data are extracted from the Commission's CDBS. All contours for existing and proposed facilities are calculated using height above average terrain calculated at one degree horizontal increments. Terrain data is extracted from the V-Soft Communications NED 03 terrain database. The NED 03 database is derived from the USGS National Elevation Data 30 meter terrain database.

Population data is from 2010 U.S. Census PL data files. Population is counted by considering the location of the centroid of each census block. The data for each block is counted if it falls within the area being counted.

Area and Population

The area within the proposed 60 dB_u F(50,50) service contour is calculated by a computer program which sums the areas within the contours based on 360 radials. The area of any significant water is then measured and subtracted. The resulting area is shown on a Figure at the end of this Exhibit. The population is calculated by the centroid method and is also listed on the Figure.
