

## EXHIBIT 18.3

### COMPLIANCE WITH 47 CFR §73.316(c)

The antenna proposed in this application will be mounted in accordance with specific instructions provided by the antenna manufacturer. The antenna will be tested by the manufacturer using the types of mounting which will be employed in the field at the time of antenna construction.

The directional antenna will be mounted 109.7 meters above ground level on a guyed tower. No other antennas of any type are or will be mounted on the same tower level as the directional antenna. No antenna is or will be mounted within any vertical or horizontal distance specified by the antenna manufacturer as being necessary for proper operation of the directional antenna.

The antenna will be assembled under the supervision of a qualified engineer, who will provide the required certification. This statement will certify that the antenna has been installed pursuant to the manufacturer's instructions. Also upon completion of antenna construction, a statement from a licensed surveyor will be submitted with the application for license certifying the antenna has been installed in the proper orientation.

The antenna will consist of eight (6) bays with 1.0 wavelength spacing. The directional antenna pattern will be produced by means of parasitic elements, adjusted to produce the required pattern. The antenna pattern will be measured by the manufacturer on the test range, and the measurement results will be supplied to the Commission at the time Form 302-FM is filed covering the construction.
