

Exhibit 1

Delivery time of antenna named on permit was unacceptable due to original digital transition date of 2/17/09 and possible displacement of our analog channel 29 facility ID 2278. We elected to have a different manufacturer design and construct an antenna to the similar specifications as one named on permit. Propagation Systems Inc. built the antenna PSIUSMD8OM-27 model # reference J308MP-679. Specifications are enclosed.

The manufacturers final performance specifications revealed a slightly higher gain than the original manufacturers published gain projections, therefor a lower transmitter output power (TPO) of 1.95kw was dictated in order to achieve the original licensed specifications of 15kw ERP.
