Phone: 254-399-9450

KWBT Waco, Texas cannot operate at it's licensed power. The power divider feeding the antenna elements has failed. It will not operate at licensed 3,200 watts but will at 668 watts at the licensed location and height.

The Requested Special Temporary Authority Coverage will not extend the normally Protected Contour. Existing RF safety considerations (Signs, Operating Rules, Site Users Agreements, Fencing) are in place. Operating at reduced power will increase the safety margin.

Kennelwood expects that repairs or replacement will take place expeditiously, but aware that tower crews are busy with TV repack work ask that the FCC grant an S.T.A. for 180 days.

Respectfully Submitted
