Contour Overlap Requirements / Allocation Study

The allocation tabulation for the proposed station is reported on the following pages. A complete explanation of how to read the printout is shown on the page after that. Summarizing the explanation, each pair of lines represents an existing or proposed full service station. Entries which have a negative number in the columns marked **IN** or **OUT** could cause interference with the proposed station. At the bottom of the report the distance to the nearest TV-6 station is reported. For clarity, the groups are discussed in the order they first appear on the tabulation.

Noncommercial Educational Stations and Applications

All the stations/applications listed are clear of prohibited contour overlap on the straight line connecting them to the proposed station, since both the **IN** and **OUT** entries are positive in all cases. Maps are provided for each entry where the straight line clearance was less than 20 km to certify the clearance extends to all azimuths. Visual inspection clearly shows there is no prohibited contour overlap; therefore no FMOVER proofs are supplied for this application. **The applicant is using V-Soft FCC method 03 arc sec engineering.** The first line of the printout is the original CP of the Proposed. The second line of the printout is KOIN-TV 6 and the third line is KAVE, which is shown to be clear of both incoming and outgoing overlap in the map. There is a close up of KAVE for verification that there is no prohibited overlap. The other stations are shown to be widely clear of any prohibited contour overlap and only NEW applications AP4877, AP3298 and AP2225 contours will be supplied in this application.

Class Contour Distance

The maximum proposed ERP is .63kW, the 8 radial HAAT is 704.4 meters and the class contour distance in kilometers is 43.83m, which after rounding is 44km. According to §73.211(b)(1), this proposal is still a Class C2 class filing.

IF (53 or 54 channel spacing) relationships

The IF frequency found in this study is KODZ, 256C, Eugene, OR. It is located at a distance of 50.07km and according to a Class A to Class C1 distance is 35km, making this application compliant.

TV channel 6

KOIN-TV 6, at a distance of 152.89km is well inside the range of the specified 246km distance and is looked at in Exhibit 19, which shows no prohibited contour overlap.
