Second Adjacent Waiver: At the proposed antenna location second adjacent channel KVLP has a signal strength of 81.5 dBu (see above). The proposed wattage of 50 watts ERP is requested. Using U/D methodology, the interference area is 41 meters in radius. Viewing below, no population exists within 44 meters in radius of the proposed antenna, located on private farmland. Therefore this area encompasses zero population, passing criteria for a waiver. Second adjacent waiver is thus then requested.
