Engineering Statement
Ch 43 KTSB-LP Santa Barbara, CA
Minor Modification
by WES, Inc. Broadcast Consultants

KTSB is filing this Minor modification due to their causing an unacceptable amount of interference to Ch 43 KCAL-DT in Los Angeles , CA. KTSB-LP Ch 43 is short spaced to two stations, K55AP an LPTV station 26 km away and KCAL-DT a digital station 150.2 km away. There is no discernable interference to any of the two stations as shown in Exhibits 6-FLR-1 & 2. The percentage of interference is zero for K55AP and .02 percent for KCAL-DT which is well below the de-minimus standard of .5 percent. The obvious reason for this is that we have modified to a directional pattern oriented at 209 degrees which gives us maximum coverage towards our city of license, Santa Barbara, CA.. KTSB-LP has not increased or decreased it's licensed ERP. KTSB-LP Ch 43 is not short spaced to any other NTSC, DTV, or LPTV stations as shown in Exhibit 6-INT-1.
