

**Technical Statement**  
**Modification of Construction Permit**  
**W299BA, Port Jervis, NY**  
**February, 2014**

This technical statement is prepared by Charles Williamson, president of Digital Radio Broadcasting, Inc., licensee of W299BA at Port Jervis, NY. This application serves four purposes: (1) specify a different power level, (2) specify a different directional antenna, (3) change the antenna elevation above ground level and (4) correct the coordinates on the tower structure.

The originally specified antenna elevation is no longer available on the tower structure, and as such, the antenna elevation on the tower changes and the power level is modified to 107 watts utilizing a different directional antenna. Further, the tower coordinates are updated.

There is no change in the co-owned primary station, WDLC(AM).
