**ENGINEERING TECHNICAL STATEMENT PREPARED BY WILLIAM T. GODFREY OF THE FIRM KESSLER AND GEHMAN ASSOCIATES, INC., TELECOMMUNICATIONS CONSULTING ENGINEERS IN CONNECTION WITH THE WMAH-DT MINOR MODIFICATION OF CONSTRUCTION PERMIT APPLICATION TO CHANGE ANTENNA SYSTEMS.**

The firm Kessler and Gehman Associates, Inc., (KGA) has been retained by the Mississippi Authority for Educational Television (MAET), Jackson, Mississippi in order to prepare engineering studies and the engineering portion of a minor modification of construction permit application to change antenna systems.

**Discussion**

The MAET proposes to modify the existing WMAH-DT Channel 16 construction permit (BPEDT20000110AAC) by replacing the authorized Dielectric TFU-26GTH 04 top-mount, non-directional DTV antenna with a Dielectric 881-32 top-mount, directional (Cardioid) DTV antenna. The change in antenna systems will not change the antenna height radiation center.

The MAET is licensed to operate WMAH-TV on UHF, NTSC Channel 19 with an ERP of 1,620 kW at an antenna height R/C of 496.0 meters above average terrain (AAT) in the vicinity of Biloxi, Mississippi with 0.75 degrees electrical beam tilt and 0.25 degrees of mechanical beam tilt at 135 degrees true north.

The proposed minor modification of construction permit is based on a change in antennas from a non-directional to a directional with the main lobe oriented toward 270 degrees with the same electrical and mechanical beam tilt, 0.75 degrees electrical and 0.25 degrees mechanical at 135 degrees true north, as the licensed NTSC antenna. All other parameters are proposed to remain in accordance with the existing construction permit.

**Transmitter Location**

It is proposed to top-mount a Dielectric model 881-32 horizontally polarized, directional (Cardioid with main lobe oriented at N270°E), UHF, DTV antenna on the existing WMAH-TV support structure owned by the MAET. The tower is registered with the FCC and has a registration number of 1041052. The support structure is located on the north side of tower road, 1.1 km east of Cable Bridge Road, McHenry, MS. The proposed antenna height radiation center is 460.7 meters above ground level (AGL). The antenna's highest point will extend to 468.6 meters AGL and the overall height of the structure will extend to 470.0 meters AGL as depicted in Exhibit 3's elevation view of the support structure.

**Interference Studies**

The proposed parameters would produce a F(50,90) 38.9 dBuV/m noise limited contour (directional) that would be fully encompassed by the authorized F(50,90) 38.9 dBuV/m noise limited contour (nondirectional). Therefore, interference studies are not required.

**Exhibits**

Exhibits 1 and 2 represent WMAH-DT's administration data, antenna and antenna structure specifications as per §VII item 10 in the DTV Engineering Technical Specifications portion of the application regarding directional antennas and beam tilt.

Exhibit 3 depicts the profile view of the proposed antenna on the antenna structure with all the appropriate elevations as per §VII item 10 in the DTV Engineering Technical Specifications portion of the application regarding supporting structures and elevations.

Exhibits 4 and 5 display the elevation pattern.

Exhibit 6 displays the elevation pattern tabulation.

Exhibits 7 and 8 display the azimuth pattern and the azimuth pattern tabulation respectively.

Exhibit 9 depicts the location of the proposed WMAH-DT site on a 7.5-Minute (Series) Topographic Map as per §VII item 10 in the DTV Engineering Technical Specifications portion of the application regarding topographic maps.

Exhibit 10 is a noise limited contour (NLC) comparison map between the WMAH-DT construction permit (CP) facility and the proposed WMAH-DT facility. This comparison map pictorially verifies that the proposed NLC is subsumed by the CP NLC.

Exhibit 11 depicts the proposed WMAH-DT coverage contour, boundaries of the principal community to be served, and the proposed transmitting location with radials every 45° as per §VII item 10 in the DTV Engineering Technical Specifications portion of the application regarding Sectional Aeronautical Charts.

Exhibit 12 is a distance to contour tabulation of the WMAH-DT CP. This exhibit depicts the distance, in kilometers, from the transmitter to the CP NLC on all 360 radials.

Exhibit 13 is a distance to contour tabulation of the WMAH-DT APP. This exhibit depicts the distance, in kilometers, from the transmitter to the APP NLC on all 360 radials. Comparing Exhibit 13 with Exhibit 12 also proves that the proposed NLC will be completely encompassed by the authorized NLC.

Exhibit 14 is a mechanical beam tilt exhibit as per §VII item 10(c) in the DTV Engineering Technical Specifications portion of the application regarding mechanical beam tilt. This exhibit shows that the mechanical beam tilt does not extend the pattern in any azimuthal direction.

### **Environmental Impact**

Assuming that the maximum lobe of radiation is oriented at the base of the tower, it will produce a power density six feet above the ground of 0.0238 mW/cm<sup>2</sup>. This is only 1.47% of the maximum permissible exposure (“MPE”) authorized by the American National Standards Institute (“ANSI”). Since the proposed operation of WMAH-DT Channel 16 will not exceed 5.0% of the MPE limit for population/uncontrolled at any point on the ground, WMAH-DT is not considered to be a “significant contributor” to the RF exposure environment pursuant to OET Bulletin 65, Edition 97-01. Therefore, contributions of exposure from other sources were not accounted for in this analysis. It is safe to conclude that the emissions will be insignificant and well within the maximum allowable requirements.

If other antennas are placed on the tower in the future, the applicant will cooperate with those users by reducing or completely terminating the power to the antenna when maintenance workers are in danger from the electromagnetic radiation emanating from the antenna.

The applicant accepts full responsibility for the elimination of any objectionable interference including that caused by intermodulation to facilities in existence or authorized prior to the grant of this application.

**Certification**

This technical statement was prepared by William T. Godfrey, Telecommunications Technical Consultant with Kessler and Gehman Associates, Inc. having offices in Gainesville, Florida and has been working in the field of radio and television broadcast consulting since 1998. He graduated from the University of North Florida with a Bachelor of Arts degree in Criminal Justice and a minor in Mathematics in 1993. As a Professional in the field of Telecommunications, he states under penalty of perjury that the information contained in this report is true and correct to the best of his knowledge and belief.

**ENGINEERING SPECIFICATIONS**

**A. Transmitter Site:**

Geographic coordinates determined by licensed surveyor:

North Latitude .....	30° 45' 18"
West Longitude .....	88° 56' 44"

Transmitter Site Address: **North side of Tower Road, 1.1 kilometers East of Cable Bridge Road, McHenry, Mississippi.**

**B. Main Studio Site Address: 3825 Ridgewood Road, Jackson, (Hinds County) Mississippi 39211-6463.**

**C. Proposed Facility:**

DTV Channel	Number .....	16
	Frequency .....	482-488 MHz

**D. Antenna Height:**

Height of Site Above Mean Sea Level (AMSL) .....	53.0 M
Overall Height of Structure Above Ground .....	470.0 M
(including all appurtenances)	
Overall Height of Structure Above Mean Sea Level .....	523.0 M
(including all appurtenances)	
Height of Site Above Average Terrain .....	7.9 M
Antenna Height Radiation Center (R/C) Above Ground .....	460.7 M
Antenna Height R/C Above Mean Sea Level .....	513.7 M
Average of All Non-Odd Radials .....	37.4 M
Antenna Height R/C Above Average Terrain .....	476.3 M

**E. System Parameters – Horizontal Polarization:**

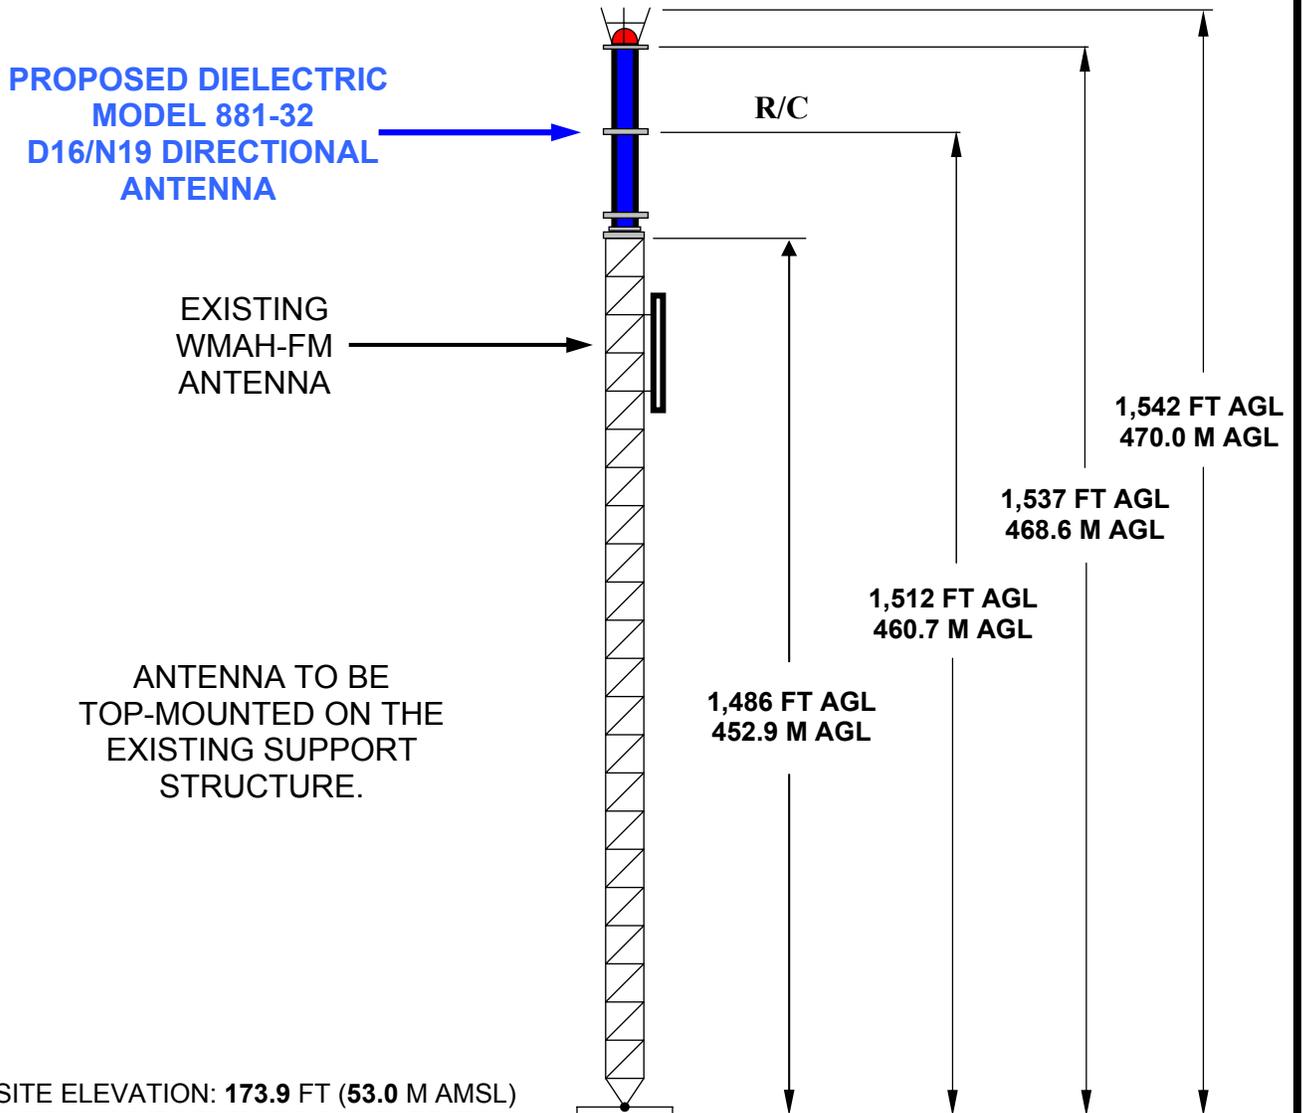

Transmitter Power Required .....	5.65 kW
Maximum Power Input to Antenna .....	3.62 kW
Transmission Line Loss .....	1.73 dB
Transmission Line Efficiency .....	67.1%
Maximum Antenna Gain in Beam Maximum .....	16.17 dB
Maximum Antenna Gain in Horizontal Plane .....	15.19 dB
Maximum Effective Radiated Power .....	21.76 dBk
In Beam Maximum .....	150.0 kW
Maximum Effective Radiated Power .....	20.78 dBk
In Horizontal Plane .....	119.7 kW

## WMAH-DT CP Distance to Contour Tabulation

Curve Table: WMAH-DT CP

-----  
Transmitter Information:

Call Letters: WMAH-DT CP  
File Number: BPEDT20000110AAC  
Latitude: 30-45-18 N  
Longitude: 088-56-44 W  
ERP: 150.00 kW  
Channel: 16  
Frequency: 485.0 MHz  
AMSL Height: 514.0 m  
Elevation: 53.0 m  
HAAT: 477.0 m  
Horiz. Antenna Pattern: Omni  
Vert. Elevation Pattern: Yes  
Electrical Beam Tilt: 0.75  
-----

Type of curve: FCC  
Location Variability: 50.0 %  
Time Variability: 90.0 %  
Field Strength: 38.94 dBuV/m

Primary Terrain: V-Soft US 3 Arc-Second Database

## WMAH-DT APP Distance to Contour Tabulation

Curve Table: WMAH-DT APP

-----  
Transmitter Information:

Call Letters: WMAH-DT APP  
Latitude: 30-45-18 N  
Longitude: 088-56-44 W  
ERP: 150.00 kW  
Channel: 16  
Frequency: 485.0 MHz  
AMSL Height: 513.7 m  
Elevation: 53.0 m  
HAAT: 476.3 m  
Horiz. Antenna Pattern: Directional  
Vert. Elevation Pattern: Yes  
Electrical Beam Tilt: 0.75  
-----

Type of curve: FCC  
Location Variability: 50.0 %  
Time Variability: 90.0 %  
Field Strength: 38.94 dBuV/m

Primary Terrain: V-Soft US 3 Arc-Second Database

Bearing (deg)	Distance (km)	HAAT (m)
