

## EXHIBIT 11

This narrative exhibit is submitted to demonstrate that the instant proposal fully complies with the interference criteria set forth in Section 74.1204 of the Commission's rules.

Attached at exhibit 12 are a spacing study and maps demonstrating clearly that there is no prohibited overlap between this proposal and any other FM services. The attached FM spacing study demonstrates that this proposal would be fully spaced even as a full power Class A FM station to all but three other FM facilities. The attached maps demonstrate that there is no prohibited contour overlap between these three stations and the instant proposed FM translator facilities. One additional FM station and two proposed new FM translators have also been included on the maps because of their proximity to the proposed facilities. As demonstrated in these maps no prohibited overlap with these stations is predicted.

The six facilities that have been included on the attached maps are: KEMX, 94.5, Locust Grove, OK (60 dBu contour to proposed 40 dBu interference contour); Vacant Allotment, 94.5, Pawhuska, OK (60 dBu contour to prop. 40 dBu int. contour); KHBZ-FM, 94.7, Oklahoma City, OK (60 dBu contour to prop. 54 dBu int. contour); KQCV-FM, 95.1, Shawnee, OK (60 dBu contour to prop. 100 dBu int. contour); Proposed Translator, 94.7, Oologah, OK (60 dBu contour to prop. 54 dBu int. contour); and Proposed Translator, 94.5, Pawhuska, OK (60 dBu contour to prop. 40 dBu int. contour). A scale of kilometers has been included on the maps. These maps were drawn to scale using the rfSoftware series of computer programs.
