

## **Providence Community Radio**

### **SECOND ADJACENT CHANNEL WAIVER REQUEST**

At the selected site WWDD CH 268B has a field strength of 84.3 dBu. Using U/D methodology, this results in a 43 m interference radius. Since the antenna is proposed at 45 m AGL, zero population is affected by interference. The proposed is also short-spaced to second adjacent channel WZLX Boston, MA CH 264B. Because the proposed is outside of WZLX's protected contour, no interference overlap exists.

Respectfully,  
Wesli Dymoke  
President  
Providence Community Radio
