WWMX(FM) FCC 302 Amendment to Application
BLH-20130107ABF
Section III-Engineering
March 20, 2013
CBS Radio Stations Inc.

An Environmental Assessment is not required, as grant of this application would not be considered a major environmental action.

The transmitting antenna, an ERI model 1184-2CP, 2 bay, $\frac{1}{2}$ wavelength element spacing is mounted on a tower that has been registered with the Commission. The center of radiation is 274 meters above ground. The ERP is 11 kW H&V.

The proposed transmitting facilities will comply with the FCC guidelines limiting human exposure to radio frequency energy. The vertical pattern is typical of a standard ERI SHP rototiller type antenna. The maximum power density level at any location at ground level, calculated in accordance with OET Bulletin No. 65 (August 1997), would be less than 5% of the applicable limit for exposures of unlimited duration. Accordingly, the proposed facility is categorically excluded by FCC Rules from having to consider the contributions of other stations at the site. If work is done on the tower in an area where over exposure could occur, the Licensee in coordination with the other users will take necessary action to prevent the overexposure of workers on the tower including reducing the transmitting power or ceasing operation completely.
