APPLICATION FOR CONSTRUCTION PERMIT
FCC FILE NO. BLTVA-20010625ABA
CLASS A TV STATION KFAZ-CA
FACILITY ID 68406
VISALIA, CALIFORNIA
CH 8 3 KW (MAX-DA)

Technical Narrative

The technical exhibit of which this narrative is part was prepared in support of an application for construction permit for Class A TV station KFAZ-CA at Visalia, California (Facility ID: 68406; File No. BLTVA-20010625ABA). Specifically, this application proposes to change transmitter site, increase the antenna radiation center height above mean sea level from 363 meters to 1772 meters, increase the effective radiated power (ERP) from 0.32 kW to 3 kW and modify the antenna system. No other changes are proposed, including no change in channel (8), frequency offset designation (-) or community of license (Visalia). As detailed below, this application is considered a "minor change" in facilities pursuant to Section 73.3572.

The proposal would not be subject to environmental processing in accordance with Section 1.1306. It is proposed to side-mount the directional antenna on an existing 39 meter supporting structure (Antenna Structure Registration Number 1065031). It is believed that the instant application conforms with all other applicable rules and regulations of the Federal Communications Commission.

Proposed Facilities

It is proposed to operate on KFAZ-CA'S current channel 8 (180-186 MHz) with a "minus" carrier frequency offset using a Jampro "off-the-shelf" model JHD-LV2-2/1(2) directional antenna (FCC antenna ID 38131) oriented at 260° true. The maximum ERP will be 3 kW. The antenna will be mounted at the 30 meter level on the existing tower (antenna structure registration number 1065031).

Minor Change Application

Figure 1 depicts the authorized and herein proposed 68 dBu contours for KFAZ-CA. As indicated, the proposed 68 dBu contour encompasses a portion of the authorized 68 dBu contour. Therefore, the proposed modification is considered a "minor" change in facilities pursuant to Section 73.3572.

Response to Paragraph 11 - TV Broadcast Analog Protection

A study has been conducted using the provisions of Section 74.705 which indicates that the proposed KFAZ-CA operation will not create prohibited interference to other existing, authorized or proposed NTSC full-power stations with the exception of KSBW on channel 8 at Salinas, California (BLCT-20020424AAN). However, based on the provisions of the OET-69 Bulletin as permitted by FCC rules [Section 74.705(e)], it is believed that KFAZ-CA's proposed operation complies with the FCC's interference criteria towards KSBW. Specifically, calculations have been made using the procedures outlined in the FCC's OET-69 Bulletin and a 2 square kilometer grid. The results of the OET Bulletin No. 69 are tabulated on Figure 2 and, as indicated, the proposal complies with the FCC's 0.5% interference threshold towards KSBW.¹ It is noted that the study considers the effect of "masking" from other authorized stations.

Response to Paragraph 11 - DTV Station and DTV Table of Allotments Protection

Calculations based on OET Bulletin No. 69 indicate that the proposed KFAZ-CA operation on channel 8 complies with the FCC's 0.5% interference threshold criteria to all allotted, proposed or actual DTV operating facilities on channels 7, 8 and 9. Figure 3 provides the output of the study based on OET-

¹ The du Treil, Lundin & Rackley, Inc. DTV interference analysis program is based on the program and procedures outlined by the FCC in the Sixth Report and Order; subsequent Memorandum Opinion and Order; and FCC OET Bulletin No. 69. A nominal grid size resolution of 2 km was employed. A Sun based processor computer system was employed. The results have been found to be in very close agreement with the results of the FCC implementation of OET Bulletin No. 69.

69 Bulletin which demonstrates that the proposed KFAZ-CA operation complies with the FCC's DTV interference criteria.

Response to Paragraph 11 - LPTV, TV Translator, Class A TV and Digital Class A Protection

A study has been conducted which indicates that the KFAZ-CA proposal will not create prohibited interference to other existing, authorized or proposed LPTV, TV Translator, Class A and Digital Class A stations with the exceptions of the following:

K07HA, Ch. 7, Camp Nelson, CA (License, BLTTVV-4208)
K08MM, Ch. 8, Bakersfield, CA (BLTVA-20011128ACU)
K08MM, Ch. 8, Bakersfield, CA (BPTVL-19980601SD)
K08FX, Ch. 8, Lake Isabella, CA (BLTTV-3865)
K09VI, Ch. 9, Springville, CA (BLTTV-19910301JR)
New, Ch. 8, Caliente, CA (BNPTVL-20000831CCA)

However, based on the provisions of the OET-69 Bulletin as permitted by FCC rules [Section 74.707(e)] it is believed that KFAZ-CA's proposed operation complies with the FCC's interference criteria towards these stations. Specifically, calculations have been made using the procedures outlined in the FCC's OET-69 Bulletin and a 2 square kilometer grid. The results of the OET Bulletin No. 69 study are tabulated on Figure 4 and, as indicated, the proposal complies with the FCC's 0.5% interference threshold.

Response to Paragraph 11 - Land Mobile Station Protection

The proposed KFAZ-CA operation complies with the FCC's interference requirements to all pertinent land mobile radio service (LMRS) stations.

Response to Paragraph 12 - Environmental Protection Act

The proposed KFAZ-CA LPTV facilities were evaluated in terms of potential radiofrequency radiation exposure at ground level in accordance with OST Bulletin No. 65, "Evaluating Compliance With FCC-Specified Guidelines for Human Exposure to Radiofrequency Radiation." The calculated power density at the base of the tower was calculated using the appropriate equation on Page 13 of the Bulletin.

Using a greater than expected vertical relative field value of 0.35 towards the tower base, a maximum visual effective radiated power of 3 kilowatts and 10 percent aural power, the calculated power density at 2 meters above ground level at the base of the tower is 0.0078 milliwatt per square centimeter (mW/cm^2), or 3.9 percent of the Commission's recommended limit applicable to general population/uncontrolled exposure areas ($0.20 \text{ mW}/\text{cm}^2$ for TV channel 8) and 0.78 percent of the Commission's recommended limit applicable to controlled exposure areas ($1.0 \text{ mW}/\text{cm}^2$ for TV channel 8). Therefore, it is believed that the proposal will comply with the RF emission rules. If necessary, measurements will be made to substantiate compliance with the RF emission rules.

Access to the transmitting site will be restricted and appropriately marked with warning signs. Furthermore, as this is a multi-user site, an agreement will be in effect in the event that workers or other authorized personnel enter the restricted area or climb the tower to ensure that appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure. Such measures include reducing the average exposure by spreading out the work over a longer period of time, wearing "accepted" RFR protective clothing and/or RFR exposure monitors or scheduling work when the stations are at reduced power or shut down.

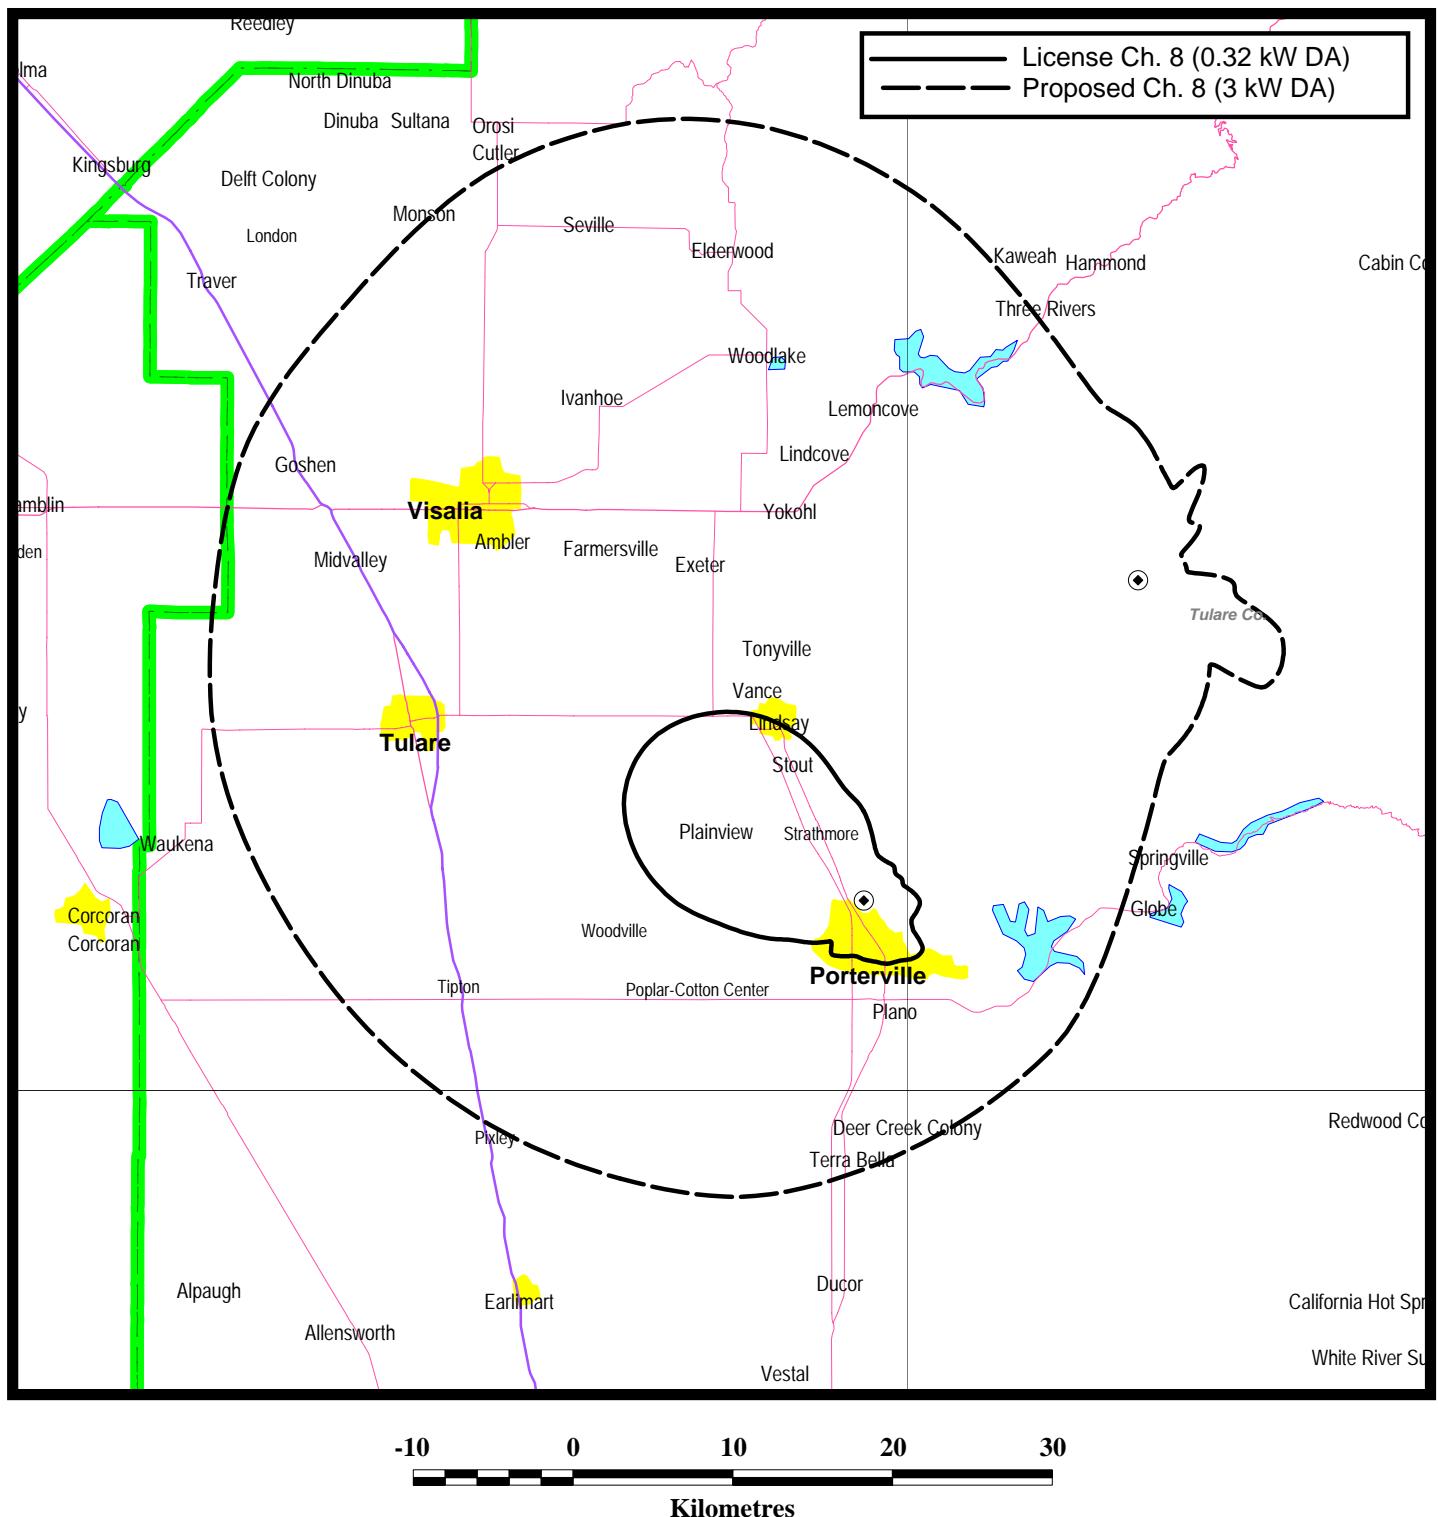

In addition, it appears that the existing tower is otherwise excluded from environmental processing as it complies with all the criteria for such an exclusion in Section 1.1306.
