

## RF Measurement Statement

I, Robert C Mumm, made RF measurements in and near the compound of the KXWA Auxiliary site on August 26, 2013.

The compound has a large fenced area around the 4 tower structures which make up the compound. All licensed facilities were operating at their FCC authorized Effective Radiated Power at the time of the measurements.

A grid extending 30 meters in each direction from the tower was marked off and measurements were made every meter in each direction in the grid. Measurements were made with a Narda model 8718B measuring device. No areas were found to exceed the  $200 \mu\text{w}/\text{cm}^2$  exposure limit for uncontrolled areas at any point near the tower site.

The site is remains fenced around the base of the towers, and posted with appropriate RF warning signs.

Respectfully,

A handwritten signature in blue ink, appearing to read "Robert C. Mumm", is written over a faint, light blue grid background.
