

Response to Construction Permit Condition #3

Construction permit BMPFT-20190807AAB contains a condition which must be addressed with the filing of the instant FCC form 350 for covering license:

3 Since the application proposes to mount its antenna above the co-located existing directional antenna of the following, KIOI-FM1, Walnut Creek, CA (Facility ID No. 4085), the permittee must submit, with the FCC Form 350, application for license, an exhibit including a statement from the manufacturer of the directional antenna listed above, stating that the proposed antenna will have no adverse effect on the aforementioned directional antenna pattern.

The K224CA antenna consists of two Kathrein-Scala CA2-FM/CP two element yagi antennas mounted one above the other per manufacturer's instructions at a 76° skew. There are no other antennas on this pole.

The KIOI-FM1 booster antenna is mounted on a pole 46 meters distant:

As the KIOI-FM antenna is not below the K224CA antenna and is in fact quite far away it is respectfully suggested that condition #3 is unnecessary and can be deleted.
