APPLICATION FOR CONSTRUCTION PERMIT

The following engineering statement and attached exhibits have been prepared for **Community Broadcasting, Inc.** ("CBI"), applicant for a new FM translator station to serve Joplin, Missouri, and are in support of their application for construction permit.¹

This application is being submitted as the long-form application for construction permit for the original short-form engineering proposal submitted in 2003. The original short-form proposal was assigned FCC File No. BNPFT-20030317KPU. Upon initial review, this proposal was found to be mutually exclusive with other applications in the vicinity. In June of 2013, CBI submitted an amendment to the short-form proposal, which eliminated the mutual exclusivities between its application and the other applications.²

The June 2013 amendment proposed several changes to the original short-form proposal. Some of these changes were necessitated by the dismantling of the tower originally proposed. The remaining changes pertained to the elimination of the mutual exclusivities. The sum of the proposed changes was minor in nature.

The proposed facility would operate on channel 263 with a maximum effective radiated power of 170 Watts at a center of radiation of 398.2 meters AMSL utilizing a non-directional antenna.³ At this height, the center of radiation would be 130.0 meters above average terrain. The

¹ The Facility ID for NEW at Joplin, Missouri is 138433.

² The Joplin short-form proposal was part of MX Group 287.

³ It should be noted that the site elevation is 318.5 meters AMSL, while the proposed center of radiation is 79.7 meters AGL. Due to the limitation of integral values on FCC Form 349, it is necessary to specify a site elevation of 319 meters AMSL and a COR of 80 meters AGL, resulting in an apparent COR of 399 meters AMSL, when in fact the actual COR is 398.2 meters AMSL or 398 meters if rounded to an integral value.

jeremyruck.com

average terrain is defined by the 330 degree true radial, on which the average elevation is 268.2 meters AMSL as determined through sampling the FCC 30-second terrain database.

The primary station for the proposed facility would be KSCV(FM) at Springfield, Missouri.⁴ The proposed 60 dBu service contour would lie outside of the KSCV(FM) 60 dBu service contour. As a result, the proposed translator would not be considered a fill-in translator for KSCV(FM). Exhibit E-1 depicts the proposed 60 dBu service contour of the translator along with the licensed 60 dBu service contour of KSCV(FM).

No change to the channel originally specified in 2003 has been proposed under the short-form amendment, or under this long-form application. A change in the originally specified location was proposed at the short-form amendment stage. The proposed facility would not impact LPFM licensing opportunities within any of the Appendix A markets. The closest Appendix A market to the proposed facility is the Springfield, Missouri market. Exhibit E-2 illustrates the site location relative to the grid for that market, and demonstrates that the proposed site would be outside of the grid buffer.⁵ This exhibit also demonstrates that the proposed facility would be located outside of the Tulsa, OK grid buffer, which is the next closest Appendix A market to the proposed facility.

The proposed facility would comply with the provisions of Section 74.1204 of the Commission's Rules to all relevant facilities. Contour protection under that section of the rules would be met to all facilities with the exception of the pending VCY America, Inc. translator application under FCC File No. BNPFT-20030310BCV. To that application, Section 74.1204(d) will

⁴ The Facility ID for KSCV(FM) at Springfield, Missouri is 1622.

⁵ The Springfield, Missouri market is a spectrum available market at the 20x20 size grid.

be utilized. Exhibit E-3 is a tabular allocation study for the proposed facility, which is graphically illustrated by the contour study in Exhibit E-4.

Since both the proposed facility and the proposed VCY facility are at the application stage, it is necessary to demonstrate that neither facility would cause interference to the other. In order to demonstrate this fact, a U/D study for both facilities relative to the other has been completed. Exhibit E-5 illustrates that the proposed translator has a predicted field strength of 85 dBu in the vicinity of the VCY translator, while that translator has a field strength of 78.5 dBu in the vicinity of the CBI translator. Since the two facilities are third adjacent to each other, interference to the reception of the CBI translator would occur in areas at the VCY site where the VCY field strength equals or exceeds 125 dBu. Similarly, in the vicinity of the CBI site, interference to VCY will be predicted to occur when the CBI field strength is 118.5 dBu or greater.

In calculating the interference area, the power density for the interfering station is calculated by the following:

$$S = \frac{E^2}{Z_0}$$

In this equation, S represents the calculated power density in Watts per square meter, E is the electric field intensity, and Z_0 is the characteristic impedance of free space of 377 ohms.

The power density is also given by:

$$S = \frac{P}{4\pi R^2}$$

JEREMY RUCK & ASSOCIATES, INC.

P.O. Box 415
221 S. 1st Avenue
Canton, IL 61520

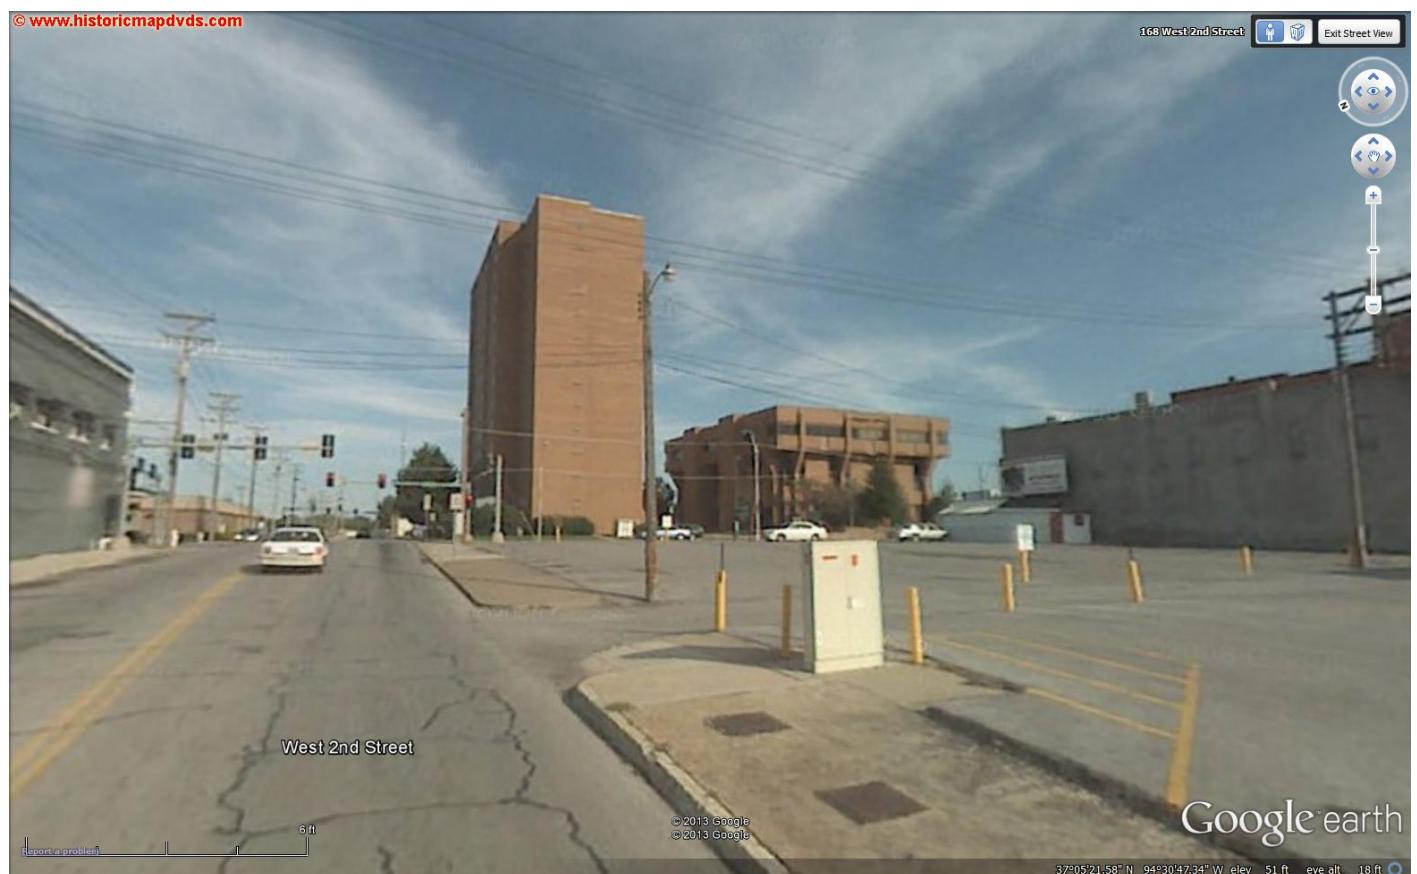

Tel: 309.647.1200
Fax: 855.332.9537
jeremyruck.com

Where S is the same units, P is the power in Watts, and R is the distance from the antenna.

Rearranging the terms in the equation, it can be solved for the distance to the desired power density as follows:

$$R^2 = \frac{P}{4\pi S}$$

The results of these calculations for the area in the immediate vicinity of the VCY site are tabulated in Exhibit E-6. As this tabulation demonstrates, the predicted interference area in the vicinity of the VCY site would be confined to regions of 54.3 meters or greater above ground level, or within 0.7 meters of the antenna.

The coordinates for the VCY application place it on the high-rise building in the above street level image. From this photograph it can be reasonably inferred that no resident population will be

Fax: 855.332.9537
jeremyruck.com

present within 0.7 meters of the proposed VCY transmit antenna. As a result, the proposed CBI facility is not expected to receive interference from the proposed VCY translator.

For the converse situation, where CBI is the interfering signal in the vicinity of its site, interference is predicted to occur when the CBI field strength is 118.5 dBu or greater. Following the same calculations, Exhibit E-7 tabulates the results for this permutation. As demonstrated in this exhibit, the predicted interference area would reside in a region of at least 36.7 meters AGL. The following street level photograph demonstrates that no structures would be present in this region, thus no populated areas would be impacted by the proposed facility.

The proposed facility would not constitute a significant environmental impact, and is exempt from environmental processing. The proposed facility would utilize an existing tower that is

jeremyruck.com

registered with the Commission. The addition of the CBI antenna to this structure will not increase the existing environmental impact already present.

In addition, the proposed facility would not constitute a radiofrequency radiation exposure hazard to the general population. The Commission's *FM Model* software package predicts a maximum power density from the proposed facility at ground level of $0.40 \mu\text{W}/\text{cm}^2$. This value is sufficiently low that the proposed translator is categorically excluded. CBI certifies, however, that it will coordinate with all other users of the site to ensure that workers and personnel having access to the site are not exposed to levels of radiofrequency radiation in excess of the applicable safety standards. Such coordination will include, but is not necessarily limited to, a reduction in transmitter power or cessation of operation.

The preceding statement and attached exhibits have been prepared by me, or under my direction, and are true and accurate to the best of my belief and knowledge.
