Re: KMLY Radio FM directional antenna installation certification

Dear Lloyd:

Today, January 18, 2017, we conducted a site visit to the location of the KMLY 95.1 MHz antenna installation upon the lands of Jones is Section 10 / 15 of Township 17 South, Range 6 East, MDB&M near Soledad, CA.

Our requested scope of work was to complete a compass survey to verify the installation azimuth of the antenna as mounted for the KMLY broadcast on 95.1 FM. Your team completed the antenna installation upon the existing tower prior to my arrival on site. The ground based compass survey was confirmed by satellite based GPS verification of the installation azimuth.

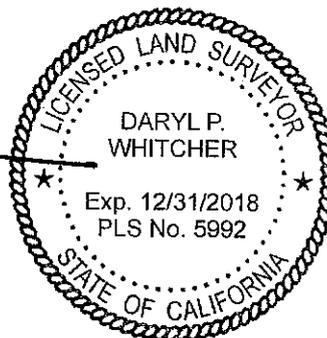

We are pleased to report that the installation was done in accordance with the assigned azimuth for the antenna mount per the installation directions. The direction of the 4 bay directional FM antenna, as installed and verified today in the field, is:

KMLY Radio FM Antenna - 190° True

Please call if you have any questions or require additional information.

Respectfully,

Daryl P. Witcher PLS 5992
