

**Environmental Impact & RFR Compliance Statement**

The proposed FM will be located on an existing communications tower that is in full compliance with all requirements of Section 1.1307 of the Commission's rules. No change to the tower is proposed, including the height.

The proposed FM will operate with .500 kW ERP, circular, non-directional, at a height above ground of 10.0 meters. For a worst case estimation, the RFR at 2 meters above ground level at the base of the tower exceeds the MPE limit for occupational/controlled exposure. There are no other broadcast facilities located at the site.

During equipment tests RFR measurements will be taken to ensure that there will be no RFR exposure of the general public in excess of the MPE limit for general population/uncontrolled exposure at any publicly accessible area. Any area found to exceed the MPE limit for general population/uncontrolled exposure will have restricted access to only authorized personnel, including the tower, and appropriate RFR hazard signs will be posted.

Access to all occupational/controlled exposure areas, specifically the tower, will be restricted and controlled with appropriate RFR hazard warning signs posted. The Applicant certifies that in cooperation with other users of the site, all authorized personnel will be protected from RFR exposure in excess of FCC guidelines while accessing any controlled exposure area, including the tower, by either reducing power or ceasing operations. Information pertaining to the contact representative of the facility will be posted.
