To whom it may concern

Shively Labs has just supplied a directional antenna to KPLK, Shop Order 30065 which is mounted above an existing Shively Labs directional antenna supplied to KMWS, Shop Order 26024. I have review each file and determined that the transmission line feeding the KPLK antenna must be attached to the 344° of the tower as it passes the KMWS directional antenna, so there will be no measurable effect on the KMWS directional pattern.

Sincerely

Robert A. Surette
Director of Sales Engineering
