**STATEMENT OF CYNTHIA M. JACOBSON
IN SUPPORT OF AN APPLICATION FOR
MODIFICATION OF CONSTRUCTION PERMIT
FCC FILE NO. BP-20030702AAJ
STATION KPDQ(AM) - PORTLAND, OREGON
800 kHz - 1.0 kW DAY/0.6 kW NIGHT - DA-N
FACILITY NUMBER: 58628**

Applicant: Salem Media of Oregon, Inc.

I am a Consulting Radio Engineer, an employee in the firm of Carl T. Jones Corporation, with offices located in Springfield, Virginia.

My education and experience are a matter of record with the Federal Communications Commission. I am a Registered Professional Engineer in the Commonwealth of Virginia, Registration No. 027914.

GENERAL

This office has been authorized by Salem Media of Oregon, Inc. ("Salem"), licensee of standard broadcast station KPDQ(AM), Portland, Oregon, to prepare this statement, FCC Form 301, Section III, and the attached engineering figures in support of an Application for Modification of Construction Permit (FCC File No. BP-20030702AAJ) to modify the nighttime facilities of KPDQ.

KPDQ is presently licensed to operate on 800 kilohertz with a power of 1.0 kilowatts daytime and 0.5 kilowatts nighttime. Both modes of operation utilize a nondirectional

STATEMENT OF CYNTHIA M. JACOBSON
KPDQ - PORTLAND, OREGON
PAGE 2

antenna. KPDQ has an outstanding Construction Permit (FCC File No. BP-20030702AAJ) to operate at 1.0 kW with the addition of one new tower at the current site for incorporation into the night array. Local zoning required that the new tower had to be shifted slightly¹, thus necessitating the filing of this application. The power level and electrical parameters have also been modified to meet the necessary protection requirements. No changes are proposed to the tower height or to the tower dimensions.

The instant application proposes to construct one new tower at the current site for incorporation into the night array. It is proposed to operate with a two-tower array at a power level of 0.6 kilowatts during nighttime hours. No changes are proposed to the daytime operation.

ANTENNA SYSTEM

The proposed nighttime antenna system will consist of two towers. The existing tower is a uniform cross-section guyed tower, 76.1 electrical degrees in height. The proposed new tower will be a tapered, self-supporting structure, 56.5 electrical degrees in height. The new tower in conjunction with the present tower, will be employed for nighttime only. The details of the nighttime directional antenna system are contained in Figure 1. Figure 3 is a polar plot of the proposed nighttime directional radiation pattern in the horizontal plane, and Figure 4 is a tabulation of the nighttime horizontal fields in mV/m at

¹The proposed new tower spacing has been increased by 9.9 meters with a re-orientation of 9.3 degrees more azimuth.

STATEMENT OF CYNTHIA M. JACOBSON
KPDQ - PORTLAND, OREGON
PAGE 3

1 kilometer. Figures 5 through 16 are tabulations of the vertical fields of the proposed night KPDQ antenna pattern.

GROUND SYSTEM

The proposed ground system for Tower 2 will consist of 120 buried, copper wire radials, 30.5 meters in length. The length of the radials were reduced to less than 1/4 wavelength to obtain local zoning approval.

The existing ground system around Tower 1 consists of 120 evenly spaced, buried, copper wire radials, 91 meters long, except where shortened due to property restrictions or when bonded to a transverse copper strap between towers, with 15 meter long radials interspersed between.

A sketch of the ground system is shown in Figure 2.

FAA NOTIFICATION AND TOWER REGISTRATION

The proposed new antenna structure will be 59.7 meters AGL (125.2 meters AMSL). A vertical sketch of the towers is shown in Figure 1. A Determination of No Hazard, Aeronautical Study No. 2003-ANM-1100-OE was issued on June 9, 2003 by the Western Pacific Regional Office. The slight relocation of the new tower from that of the outstanding Construction Permit is negligible, therefore the coordinates of the new tower remain the same.

STATEMENT OF CYNTHIA M. JACOBSON
KPDQ - PORTLAND, OREGON
PAGE 4

Because the proposed tower structure is less than 60.96 meters, the structure will be exempted from the FCC tower registration process.

SITE AND SURROUNDING TERRAIN

The center of the array coordinates for the night array are:

North Latitude: 45E 28' 39"

West Longitude: 122E 45' 03"

The site elevation was obtained from data on file with the FCC. Site photographs and a map of the proposed site are contained in FCC files.

BLANKETING AND STATION INTERACTION

The population within the proposed KPDQ nighttime 1000 mV/m contour is less than 300 persons, therefore, Section 73.24(g) of the Rules is satisfied. The present and proposed 1000 mV/m nighttime contours are depicted in Figure 17.

In response to all complaints of blanketing interference, the applicant will undertake steps to mitigate the blanketing effects in accordance with the requirements of Section 73.88.

There are no AM stations located within 3.2 kilometers of the proposed KPDQ antenna site. There are several FM stations and TV stations located within 10 kilometers of the proposed site. It is expected that no detrimental interaction will occur with any station, particularly since KPDQ currently operates from this site.

STATEMENT OF CYNTHIA M. JACOBSON
KPDQ - PORTLAND, OREGON
PAGE 5

COVERAGE CONTOURS

The present and proposed nighttime service contours are shown in Figure 19. The present and proposed nighttime interference-free contours do not serve the entire community of license. The present 10.5 mV/m nighttime interference-free contour encompasses 38.6% of the city of license, Portland, Oregon. The proposed 10.5 mV/m nighttime interference-free contour will encompass 40.9% of the city of license. Both the present and proposed nighttime fail to meet the requisite service to the city of license.

Therefore, it is respectfully requested that a waiver of Section 73.24(i) of the Rules be granted.

JUSTIFICATION FOR WAIVER

The proposed nighttime operation of KPDQ seeks to increase coverage of the city of license. A 2.3% increase in coverage of Portland over that provided by KPDQ's licensed facility will be realized with the proposed night operation.

The proposed nighttime city coverage is less than that proposed in the outstanding Construction Permit authorization². However, local zoning issues prohibit realization of the coverage that Construction Permit application proposed. KPDQ applied several years ago for zoning approval for addition of the second tower at its site. When KPDQ later prepared and filed the Construction Permit application, the tower's placement at the site was

²FCC File No. BP-20030702AAJ proposed 10.5 mV/m nighttime interference-free contour encompassed 56.2% of the city of license.

STATEMENT OF CYNTHIA M. JACOBSON
KPDQ - PORTLAND, OREGON
PAGE 6

modified somewhat in the application to provide protection to a subsequently filed notification of a proposed modification of a Mexican station. Meanwhile, after an extended zoning process, zoning approval was finally granted for the placement of the tower as proposed in the original zoning application and local zoning authorities would not agree to modify the tower placement at the site to correspond to the Construction Permit. As a result, this application proposes modification of the Construction Permit to correspond to the tower placement approved by zoning authorities. The impact of modifying the placement of the new second tower due to these zoning issues, coupled with the required nighttime protections, has resulted in less nighttime service to Portland than authorized in the unbuildable Construction Permit, but an increase over that provided by the licensed KPDQ facility. All attempts were made to adjust the electrical parameters to maximize coverage of Portland.

Therefore, it is submitted that the public interest would be served by a waiver of Section 73.24(i) of the Rules and grant of the KPDQ proposal described herein.

NIGHTTIME ALLOCATION STUDY

The results of the nighttime study are shown in Figures 18 and 20. Figure 18 is a tabulation of the RSS calculations for co-channel and first-adjacent stations in which KPDQ may impact. The proposed facility of KPDQ will not raise the limit of any co-channel or first-adjacent station.

STATEMENT OF CYNTHIA M. JACOBSON
KPDQ - PORTLAND, OREGON
PAGE 7

The frequency of 800 kHz is a Mexican Class A channel. XEROK, Ciudad Juarez, Mexico is the Class A station of concern. Figure 20 depicts the proposed 0.025 mV/m - 10% skywave contour of KPDQ and the 0.5 mV/m - 50% skywave contour of XEROK. Presently, overlap of the skywave contours occurs. Any increase of overlap occurs in the United States or over the ocean.

ENVIRONMENTAL IMPACT

The proposal described herein does not involve high intensity lighting as specified in Section 1.1307(a)(8) of the rules, nor will it result in human exposure to radiofrequency radiation in excess of the standards specified in Section 1.1307(b). The applicant has determined that under the provisions of Section 1.1306, the proposal is excluded from environmental processing.

Further explanation for the criteria specified in Section 1.1307(a)(1)-(7) can be found in this report as a separate attachment.

RADIOFREQUENCY IMPACT

On January 1, 1986, the FCC amended its Rules to implement the National Environmental Policy Act of 1969 (NEPA). This amendment established RF radiation protection guidelines to be used to determine if potentially harmful RF exposure is possible from an FCC-regulated transmission facility. Effective October 15, 1997, the FCC adopted revised guidelines and procedures for evaluating environmental effects of RF emissions.

STATEMENT OF CYNTHIA M. JACOBSON
KPDQ - PORTLAND, OREGON
PAGE 8

These revised guidelines incorporate two tiers of exposure limits based on whether exposure occurs in a “controlled” (occupational) situation or an “uncontrolled” (general population) situation. The FCC has also revised OET Bulletin No. 65 entitled, “Evaluating Compliance with FCC Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields,” to aid in the radiation exposure analysis. This bulletin, as well as other current literature, provides detailed information for conducting an analysis including mathematical equations that can be used to determine compliance with the Commission’s guidelines.

CALCULATION METHODS

Verification of compliance with FCC-specified guidelines for human exposure to RF radiation was obtained from OET Bulletin No. 65. To obtain distance to compliance with the guidelines, Tables 1 and 2, Section 1 of Supplement A was used. The proposed KPDQ facility will operate on 800 kHz with a nominal power of 1.0 kW daytime and 0.6 kW nighttime (DA-N). Assuming a worst-case scenario of 1.0 kW of power in each tower, a fence of at least 3 meters (9.8 feet) from the base of each tower will be constructed. This fencing requirement will satisfy both the occupational/controlled and general population/uncontrolled MPE limits. The fences will be locked to preclude public access to the towers and appropriate warning signs will also be posted.

It is submitted that the proposed KPDQ station will not constitute a potential hazard to the quality of the human environment. Accordingly, the KPDQ proposal, as described

STATEMENT OF CYNTHIA M. JACOBSON
KPDQ - PORTLAND, OREGON
PAGE 9

herein, should be categorically excluded from RF environmental processing under Section 1.1307(b) of the Rules.

OCCUPATIONAL SAFETY

Access to the KPDQ antenna supporting tower bases will be restricted to authorized maintenance personnel only. KPDQ insures protection to station personnel or tower contractors working in the vicinity of the towers. Procedures will be followed during times of service or maintenance of the transmission systems when necessary to avoid potentially harmful exposure to personnel.

In light of the above, the proposed KPDQ facility should be categorically excluded from RF environmental processing under Section 1.1307(b) of the Commission's Rules.

CONCLUSION

This statement and Section III of FCC Form 301 and the attached figures were prepared by me or under my direct supervision and are believed to be true and correct.

It is submitted that the proposed operation described herein complies with the technical standards of the Rules and Regulations of the Commission.

FEBRUARY, 2005

Frequency: 800

Explanation of "CODE" which appears on the right edge of this report:

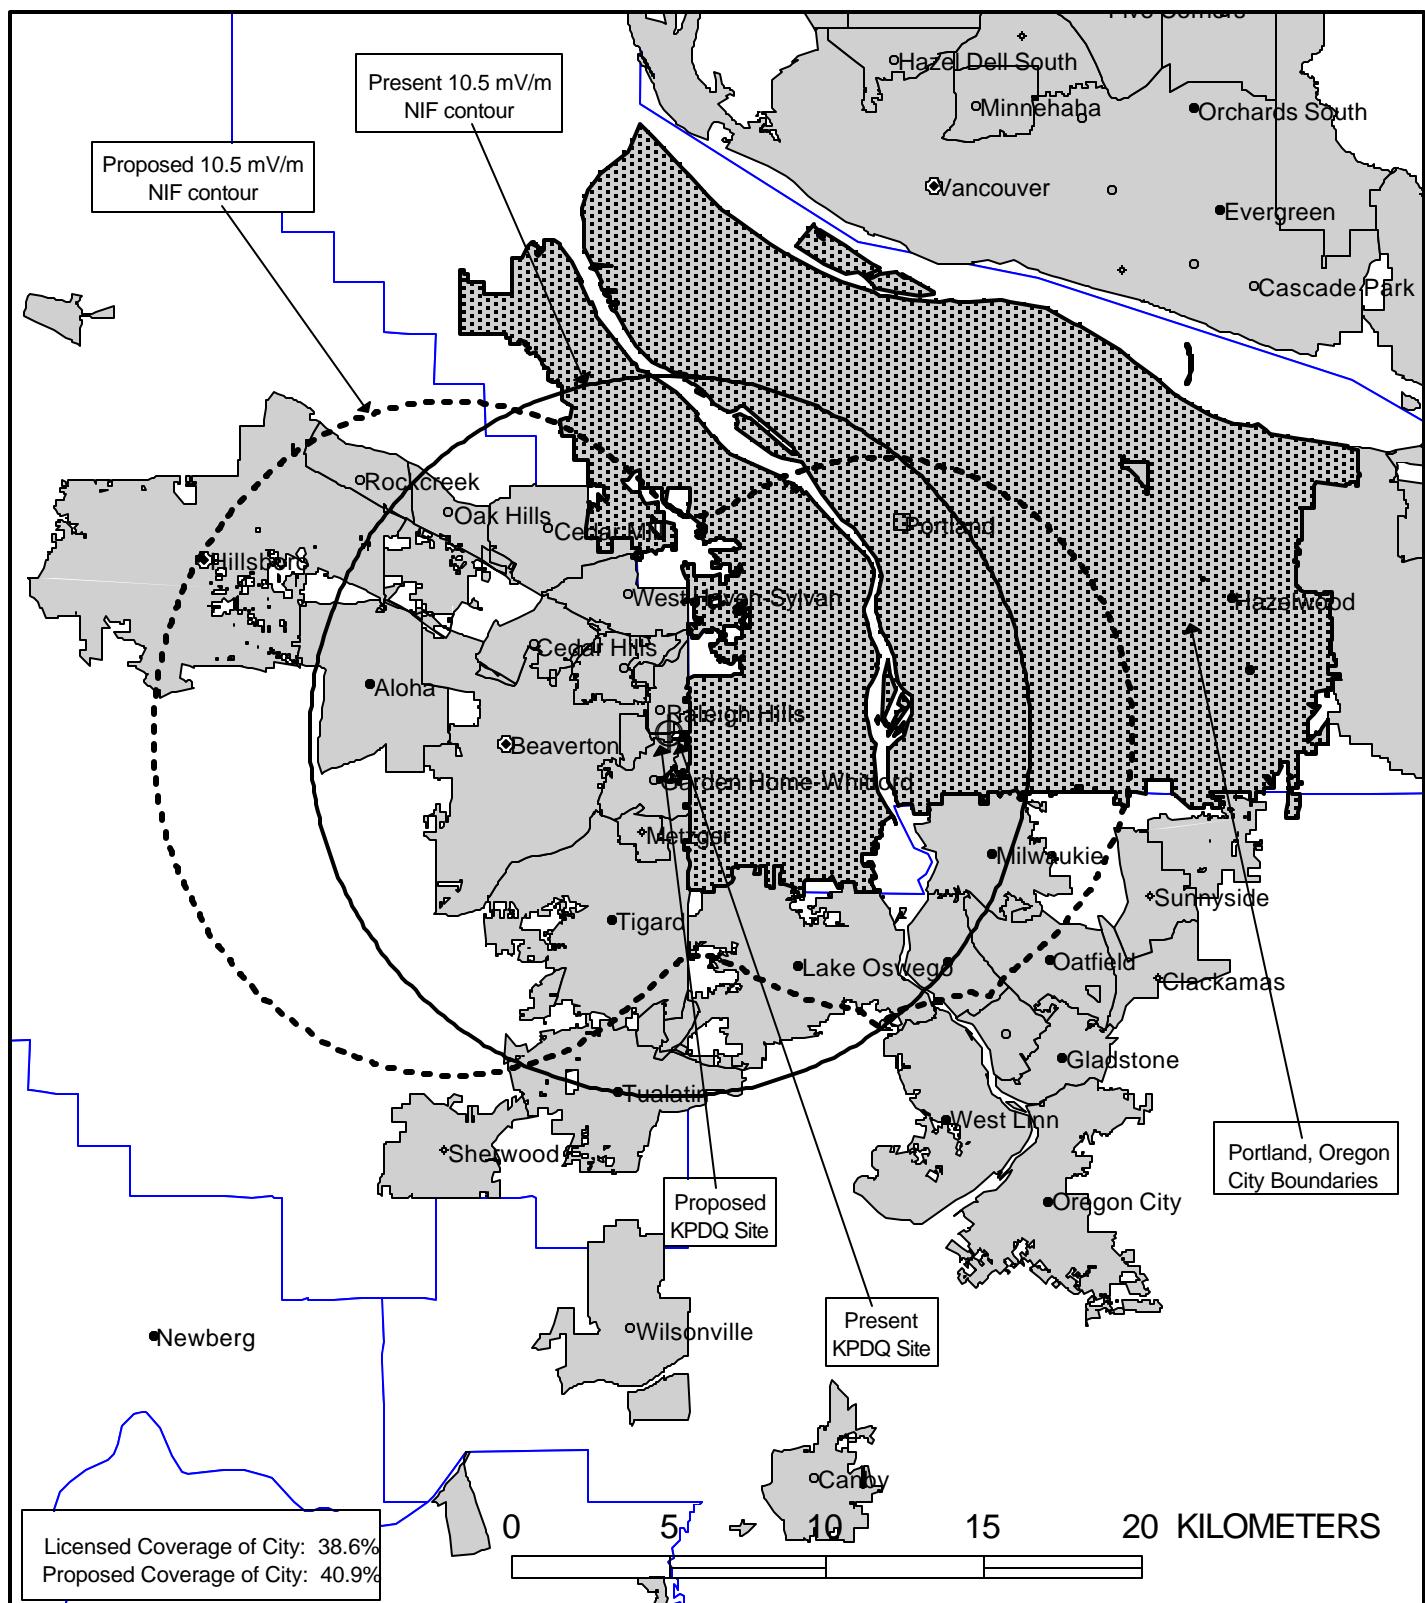

CODE
123456
|||||--- [6] Corresponding expanded band domestic status (if
||||| this is a lower band station)
|||||--- [5] Not included in RSS Calculation because:
|||| (1) Deleted Domestically
|||| (2) Application
|||| (3) Petition for Expanded Band
|||| (4) Objected
|||| (5) B-List or D-List
|||| (6) Class D station (formally 2S or 3S)
|||| (7) Cuban Operation
|||| (8) Multiple Entry
|||| (9) Test record
||||--- [4] FCC Dummy Data Code
|| (B) Some data assumed; (V) Vertical antenna parameters assumed;
|| (1) Vertical and horizontal antenna parameters assumed;
|| (2) Coordinates are assumed
||--- [3] FCC Bad Record Code
|| (B) Some data known to be bad; (V) Bad vertical antenna parameters;
|| (1) Bad coordinates; (2) Bad horizontal antenna parameters;
|| (3) Bad horizontal and vertical antenna parameters
||--- [2] IFRB Notified Status
| (A) Negotiated Priority; (P) Proposed; (T) Informal Proposal
| (O) Operating; (U) Un-notified; (Z) Test Record
|--- [1] Domestic Status
| (C) Construction Permit; (L) License; (A) Application;
| (D) Deleted; (M) Petition for Expanded Band;
| (P) Planned expanded band; (T) Test;
| (S) Petition for expanded band w/ stereo
