

**Environmental Exhibit and Supplemental Statement**

**Statement of Hammett & Edison, Inc., Consulting Engineers**

Hammett & Edison, Inc., Consulting Engineers, has been retained by KQED Inc., licensee of Non-Commercial Station KQED-FM, Channel 203B, San Francisco, California, to prepare the engineering portions of an application for construction permit for a new auxiliary antenna, to be located on Sutro Tower in San Francisco. Because the KQED-FM main antenna is located 7.4 kilometers to the south, at San Bruno Mountain, an application for construction permit is required for the proposed auxiliary antenna.

**Environmental Considerations**

The proposed operation would not be a major environmental action. None of the major environmental action triggers in Section 1.1310 of the FCC Rules are believed to apply. The auxiliary antenna will be side-mounted on an existing tower that has an Antenna Structure Registration, and will not increase the overall height of the tower.

The proposed operation is predicted ground-level power density of less than 0.5% of the 0.2 mW/cm<sup>2</sup> public limit applying at FM frequencies. Since this is less than 5% of the applicable limit, the station is categorically excluded by Section 1.1307(b)(3) of the FCC Rules from having to consider the contributions of other stations on the tower.

**Auxiliary Antenna Coverage Would Not Extend  
the Licensed Main Antenna Coverage Over Land**

As shown by the attached figure, the proposed operation of an auxiliary antenna with a maximum effective radiated rated power of 58.0 kW using a directional antenna would not extend the licensed F(50,50) 60 dBu contour over any land portion. There is a small arc over the Pacific Ocean where the proposed 60 dBu auxiliary antenna contour would slightly exceed the licensed 60 dBu contour, but since this contour extension does not occur over land it is believed to be permissible.

**Environmental Exhibit and Supplemental Statement**

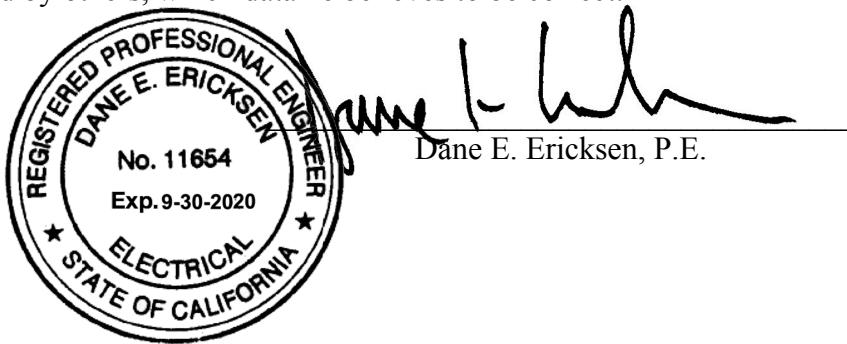

**List of Figures**

In carrying out these engineering studies, the following figures were prepared under my direct supervision:

1. Map showing F(50,50) 60 dBu contours of proposed auxiliary antenna operation versus licensed F(50,50) 60 dBu contour.
2. Manufacturer's documentation for proposed directional auxiliary antenna.

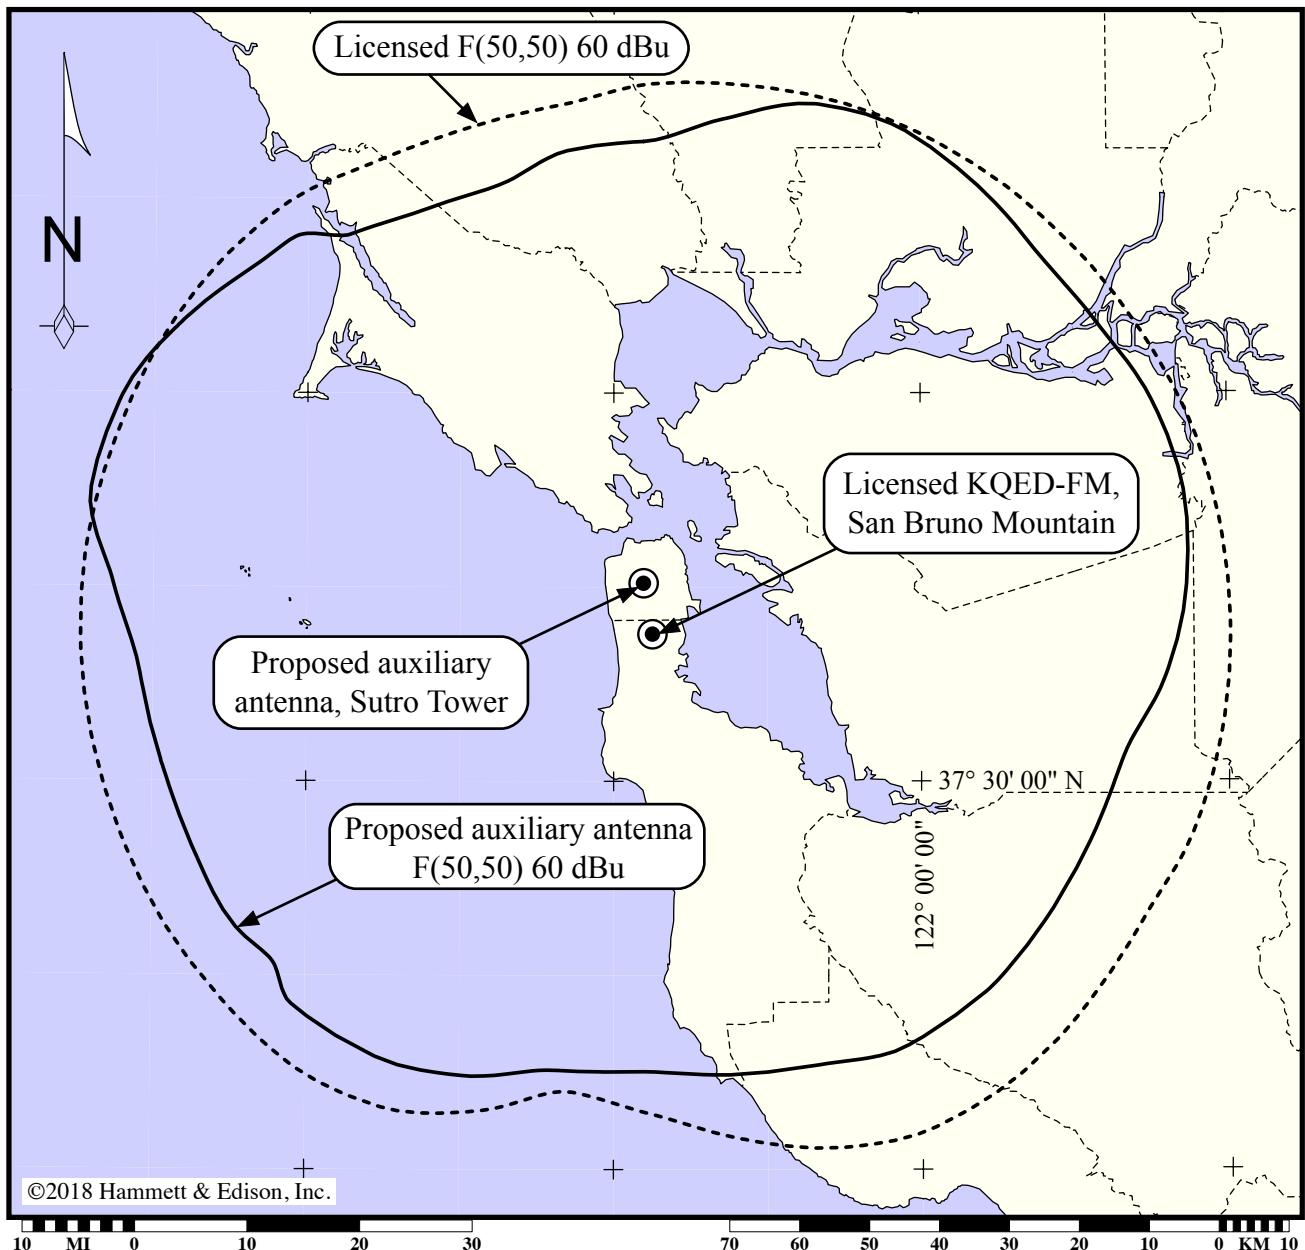

**Authorship**

The undersigned author of this statement is a qualified Professional Engineer, holding California Registration No. E-11654, which expires on September 30, 2020. This work has been carried out under his direction, and all statements are true and correct of his own knowledge except, where noted, when data has been supplied by others, which data he believes to be correct.

October 18, 2018

**Proposed Auxiliary Antenna Versus  
Licensed Main Antenna Coverage Contours**

Albers equal area map projection. Geographic coordinate marks shown at 30-minute increments. County limits shown taken from U.S. Census Bureau TIGER/Line 2010 data.
