

## **REVISED EXPOSURE EXHIBIT**

In its original application, Applicant had specified a fully-spaced 10-bay “ring and stub” type FM antenna for its transmitter plant. As Applicant has installed a 10-bay half-wave spaced antenna (Shively model 6813) for the purposes of its License to Cover Application, Applicant hereby submits this revised RF Exposure study, derived directly from the Commission's FM Model program:

**FIGURE 4:** The Commission's FM Model program indicates that radiation exposure exceeding 20.0 Microwatts per centimeter squared does not occur at any point within the field of the transmitting antenna.
