

Exhibit 14

Explanation of Construction

The KFAM digital facilities were constructed as outlined in construction permit BDFCDTA-20090824ADH with the exception of the antenna. The PSI Model LP24OI-14 omni antenna was replaced with a PSI Model LP16OI-14 omni antenna. No change was made to ERP (Effective Radiated Power) nor to HAAT (Height Above Average Terrain). This antenna has the same horizontal pattern as that prescribed in the construction permit application except that the gain is less. This made no difference in coverage and interference protection to other facilities.
