 Rogue River, Oregon 97537

In evaluating the increase in power and proposed relocation, change of coverage and channel displacement for K56HV an out going interference study was executed at the new tower location with an ERP of 13 KW. The stations listed in the table below showed possible interference. When these stations in the table below were evaluated for outgoing interference using the OET-69 Longly-Rice methodology there was a zero percent interference found in each case
