

### **Technical Discussion**

This application for a minor change for WPKE(AM) on 1240 kHz at Pikeville, KY is submitted to correct the antenna coordinates and heights based on the results of a professional survey of the site. The resultant coordinates and antenna heights have been previously submitted in an antenna registration listed herein. This application seeks to correct the licensed parameters of the station.

The change in coordinates results in a movement of the tower location of .21 km along an azimuth of 252.6 degrees True. This change is clearly *deminimus*. Furthermore, an allocation analysis shows that the change results in an increase of .2 km in the spacing to the only relevant facility – WVSR on 1240 kHz at Dunbar, WV (from 123.1 km to 123.3 km).

Consequently, it is concluded that the correction in parameters requested here is indeed a minor change and does not result in any actual or theoretical increase in interference to or from ant protected facility.
