

WFXI-DT
Channel 24
Exhibit 48

Page 1

This exhibit address the tower coordinate modifications contained in the associated modification application for WFXI-DT, Channel 24, Morehead City, NC.

Due to the structural inadequacy of the original tower structure, specifically the ability to support additional antennae and transmission line, a new tower structure was constructed as a full replacement for the old structure.

The new tower structure (ASR#1253623) is located 26 meters from the original structure (ASR#1209755) and the WFXI-DT antenna center of radiation remains at the same level of 215 meters AGL.

Therefore, this tower coordinate modification has no adverse effect on the coverage contours of the WFXI-DT relative field pattern as depicted in the coverage map that is attached as page 2 of this exhibit.
