Additional Background Information pertaining to this application.

This additional information is provided pursuant to a conversation with Mr. Authur Doak of the Commission, and is provided to place this application in perspective:

1. KASR was originally licensed to Conway, Arkansas as a class A. KVRE Provides contour protection by use of a directional antenna.

2. KASR, by Petition for rulemaking (RM10633) requested a change in city of license to Vilonia, Arkansas, and an increase in power to C-3. This was approved December 3, 2003, and subsequently KASR filed an application to move the station. This application (BPH-20040510AAN was approved in November, 2004. This move must be made to provide primary service to Vilonia as per RM-10633.

3. The instant application of KVRE proposes deletion of the directional antenna, as contour protection will no longer be required when the KASR move is effected.

4. KVRE realizes that operation with non directional antenna will not be possible until KASR completes construction and begins operations at Vilonia. We understand that a condition to that effect may be required when the instant application is granted.
