**ENGINEERING STATEMENT OF CYNTHIA M. JACOBSON
IN SUPPORT OF AN
APPLICATION FOR CONSTRUCTION PERMIT
KJPN – HONOLULU, HAWAII
1180 kHz - 6.0 kW D/4.5 kW N - ND-U
Facility ID: 13985**

Applicant: Salem Media of Hawaii, Inc.

I am a Consulting Engineer, an employee in the firm of Carl T. Jones Corporation, with offices located in Springfield, Virginia. My education and experience are a matter of record with the Federal Communications Commission. I am a Registered Professional Engineer in the Commonwealth of Virginia, Registration No. 027914.

GENERAL

This office has been authorized by Salem Media of Hawaii, Inc. ("Salem"), licensee of standard broadcast station KJPN, Honolulu, Hawaii, to prepare this statement, FCC Form 301 (Section III-A), and the attached engineering exhibits in support of an Application for Construction Permit, seeking authority to change frequency from 1170 kHz to 1180 kHz. No other changes are proposed.

TRANSMITTER SITE AND VICINITY

The transmitter site specified herein is the same as authorized in the outstanding Construction Permit, FCC File No. BP-20020206AAH. The geographic coordinates of the non-directional antenna are:

STATEMENT OF CYNTHIA M. JACOBSON
KJPN – HONOLULU, HAWAII
PAGE 2

21 - 26 - 18 North Latitude

157 - 59 - 29 West Longitude

The site photographs depicting the topography in the vicinity of the transmitter site are contained in FCC Files. The site elevation was obtained from data on file with the FCC.

ANTENNA SYSTEM

The antenna system consists of one tower. The existing tower is a folded unipole, steel radiator or uniform cross-section, guyed tower, 77.0 electrical degrees.

GROUND SYSTEM

The ground system is comprised of 120 equally spaced copper radials, 64.1 meters in length.

BLANKETING AND STATION INTERACTION

The present and proposed daytime and nighttime 1000 mV/m contours are depicted in Figure 1. The population within the proposed KJPN 1000 mV/m contour is less than 300 persons. In response to all complaints of blanketing interference, the applicant will undertake steps to mitigate the blanketing effects in accordance with the requirements of Section 73.88.

The proposed antenna site is located greater than 3 kilometers from other area AM stations with the exception of KITT and KRUD with which “triplexing” is proposed. There

STATEMENT OF CYNTHIA M. JACOBSON
KJPN – HONOLULU, HAWAII
PAGE 3

are no operating FM stations or TV stations located within 10 kilometers of the proposed site. It is expected that no detrimental interaction will occur with any station due to the frequency change of KJPN.

PROTECTION OF FCC MONITORING STATION

An FCC monitoring station, referred to as the “Honolulu Office,” is located in Waipahu, Hawaii. The 10 mV/m limit at the FCC monitoring station as required by Section 73.1030(c) of the Rules is exceeded. The current FCC specified limit for KJPN is 40 mV/m. Therefore, it requested that KJPN retain the specified maximum limit of 40 mV/m. It is expected that no negative impact will occur since KJPN is only requesting a 10 kHz frequency change.

COVERAGE CONTOURS

Field strength contours were calculated using the “equivalent distance” method for paths consisting of more than one conductivity. All conductivity data employed in the calculation of field strength contours was obtained from FCC Figure M-3.

The present and proposed daytime service contours are shown in Figures 2 and 3. The present and proposed 0.5 mV/m coverage contours are shown in Figure 4.

The present and proposed nighttime service contours are shown in Figure 7.

STATEMENT OF CYNTHIA M. JACOBSON
KJPN – HONOLULU, HAWAII
PAGE 4

Neither the daytime nor the nighttime contour encompasses the entire city of license. Therefore, it is respectfully requested that a waiver of section 73.24(i) of the Rules be granted.

JUSTIFICATION OF WAIVER

As shown in Figures 3 and 7, the proposed coverage does not significantly differ from the present coverage during the daytime or nighttime. Additionally, the actual NIF limit is lowered, offering a slightly larger nighttime service contour as shown in Figure 7.

Hawaii is the only state in the Union with no incorporated places recognized by the Census Bureau. All places shown for Hawaii are Census Designated Places (“CDP”). By agreement with the State of Hawaii, the Census Bureau does not show data separately for the city of Honolulu. The city of Honolulu is coextensive with Honolulu County. CDP’s are densely settled areas of population that are identifiable by name, but are not legally incorporated. CDP’s have no legal status, nor do they have elected officials to serve municipal functions. As the Commission recognized in Family Media, Inc., 102 F.C.C.2d 759, ¶ 7 (ALJ 1985):

The only governmental entities in the State of Hawaii are its five counties since there are no communities or places with organized municipal governments. The geographical boundaries of the City of Honolulu are coextensive with the County of Honolulu; that is, the people of the city and county of Honolulu constitute a single body politic incorporated under the name “City and County of Honolulu” pursuant to the Articles of Incorporation of their revised charter approved on November 7, 1972. The coextensive City and County of Honolulu is comprised of the entire Island of Oahu and all other islands in the State of Hawaii which are not included within any other county in the State. The other islands include certain largely uninhabited

STATEMENT OF CYNTHIA M. JACOBSON
KJPN – HONOLULU, HAWAII
PAGE 5

islands extending approximately 1,400 – 1,500 miles westward from the Island of Oahu to Kure Island.

Both the present and proposed technical facility fail to meet the requisite service to the city of license, which is actually the County of Honolulu (or the entire Island of Oahu), see Figure 3. The present 5.0 mV/m daytime contour covers 50.6% of the Island of Oahu, while the proposed 5.0 mV/m daytime contour covers 45.8%. A 4.8% decrease in 5.0 mV/m coverage of Oahu will result from the proposed operation.

Likewise, Figure 7 depicts the nighttime interference-free contours of both the present and proposed facility. Neither contour fully encompasses the community of license (the entire Island of Oahu). The 5.0 mV/m contour is higher than the proposed NIF of 1.57 mV/m and the present NIF of 1.96 mV/m¹, thus the 5.0 mV/m contour becomes the community service contour. The present 5.0 mV/m nighttime contour covers 45.2% of the Island of Oahu, while the proposed 5.0 mV/m contour covers 40.7%. The proposed 5.0 mV/m contour will decrease the coverage of the Island of Oahu by 4.5% when compared to the present 5.0 mV/m nighttime contour.

It should be noted that this predicted loss in service is due to the anomaly of the FCC's groundwave prediction method. The change in frequency from 1170 kHz to 1180 kHz results in contour predictions using Figure 14 being compared to predictions using Figure 15 of 73.184 of the Rules. If necessary, a waiver of Section 73.24(i) of the Rules is respectfully requested.

¹ The present NIF covers 81.3% and the proposed NIF covers 84.6% of the Island of Oahu.

STATEMENT OF CYNTHIA M. JACOBSON
KJPN – HONOLULU, HAWAII
PAGE 6

Due to the extremely rugged terrain in the Hawaiian Islands, very few tower sites exist. The herein frequency change is to better accommodate the use of this site for a diplex operation. As can be noted over the years, tower sites are becoming more difficult to secure on the Hawaiian Islands.

Therefore, it is submitted that the public interest would be served by a waiver of Section 73.24(i) of the Rules and grant of the KJPN proposal described herein.

DAYTIME ALLOCATION STUDY

There is one third-adjacent channel within a distance to warrant a daytime allocation study. As shown in Figure 5, the proposed facility will not have a negative effect on the third-adjacent station.

NIGHTTIME ALLOCATION STUDY

The frequency of 1180 kHz is a US Class A channel. WHAM, Rochester, New York is the Class A station of concern. Due to the distance separation between WHAM and the proposed facilities of KJPN, an exhibit is not attached herein. The proposed night facilities would have to radiate in excess of 2500 mV/m for the 0.025 mV/m - 10% skywave contour to overlap the 0.5 mV/m - 50% skywave contour of WHAM. KJPN proposes a radiation of 631.09 mV/m, less than the permitted 2500 mV/m. Therefore, no overlap of skywave contours will occur.

The proposed facility of KJPN will not raise the limit of any station. Figure 6 is a

STATEMENT OF CYNTHIA M. JACOBSON
KJPN – HONOLULU, HAWAII
PAGE 7

tabulation of RSS calculations of co-channel and first-adjacent stations in which KJPN may impact. A review of these studies on a station-by-station basis finds that the proposed KJPN nighttime facility is compliant with current Commission allocation standards.

FAA NOTIFICATION

Since KJPN is proposing to utilize an existing tower without physical alteration, notification to the Federal Aviation Administration is not necessary.

The proposed antenna is an existing structure and less than 60 meters; therefore Tower Registration is not necessary.

ENVIRONMENTAL CONSIDERATIONS

The proposal described herein does not involve high-intensity lighting as specified in Section 1.1307(a)(8) of the Rules, nor will it result in human exposure to radiofrequency radiation in excess of the standards specified in Section 1.1307(b).

RADIOFREQUENCY IMPACT

On January 1, 1986, the FCC amended its Rules to implement the National Environmental Policy Act of 1969 (NEPA). This amendment established RF radiation protection guidelines to be used to determine if potentially harmful RF exposure is possible from an FCC-regulated transmission facility. Effective October 15, 1997, the FCC adopted revised guidelines and procedures for evaluating environmental effects of RF emissions.

STATEMENT OF CYNTHIA M. JACOBSON
KJPN – HONOLULU, HAWAII
PAGE 8

These revised guidelines incorporate two tiers of exposure limits based on whether exposure occurs in a “controlled” (occupational) situation or an “uncontrolled” (general population) situation. The FCC has also revised OET Bulletin No. 65 entitled, “Evaluating Compliance with FCC Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields,” to aid in the radiation exposure analysis. This bulletin, as well as other current literature, provides detailed information for conducting an analysis including mathematical equations that can be used to determine compliance with the Commission’s guidelines.

The proposed KJPN facility will be co-located with the 1370 kHz operation of KITT, Pearl City, Hawaii and the 1130 kHz application facilities of KRUD, Honolulu, Hawaii. Thus, the proposed site is considered a multiple use site.

CALCULATION METHODS

Verification of compliance with FCC-Specified guidelines for human exposure to RF radiation was obtained from OET Bulletin No. 65. The proposed KJPN facility will operate on 1180 kHz with a worst-case power of 6.0 kW. To obtain distance to compliance with the guidelines, Table 1, Section 1 of Supplement A was used. Radio Station KITT is licensed to operate on 1370 kHz with a power of 6.2 kW. Table 2, Section 1 of Supplement A was used for KITT. Radio Station KRUD is licensed to operate on 1130 kHz with a worst-case power of 6.0 kW. Table 1 was used to determine the fencing requirement. To comply with FCC limits, the minimum fencing requirement is 5.2 meters, 2 meters, and 5.2 meters for KJPN, KITT, and KRUD, respectively.

STATEMENT OF CYNTHIA M. JACOBSON
KJPN – HONOLULU, HAWAII
PAGE 9

A fence of at least 12.4 meters (40.7 feet) from the base of the tower will be constructed. The fencing of 12.4 meters will satisfy both the occupational/controlled and general population/uncontrolled MPE limits. The fence will be locked to preclude public access to the tower, and appropriate warning signs will also be posted. If requested by the Commission, the applicant will conduct electromagnetic field strength measurements to establish that the MPE limits specified by the FCC are not exceeded.

It is submitted that the proposed frequency change of KJPN to the KITT and KRUD system will not constitute a potential hazard to the quality of the human environment. Accordingly, the KJPN proposal, as described herein, should be categorically excluded from RF environmental processing under Section 1.1307(b) of the Rules.

OCCUPATIONAL SAFETY

Access to the KJPN/KITT/KRUD antenna supporting tower base will be restricted to authorized maintenance personnel only. To ensure protection of station personnel or tower contractors working in the vicinity of the tower, the stations will reduce power or cease operation during times of service or maintenance of the transmission systems when necessary to avoid potentially harmful exposure to personnel. Joint procedures will be followed by both stations during times of service or maintenance of the transmission systems.

In light of the above, the proposed facility should be categorically excluded from RF environmental processing under Section 1.1307(b) of the Commission's Rules.

STATEMENT OF CYNTHIA M. JACOBSON
KJPN – HONOLULU, HAWAII
PAGE 10

CONCLUSION

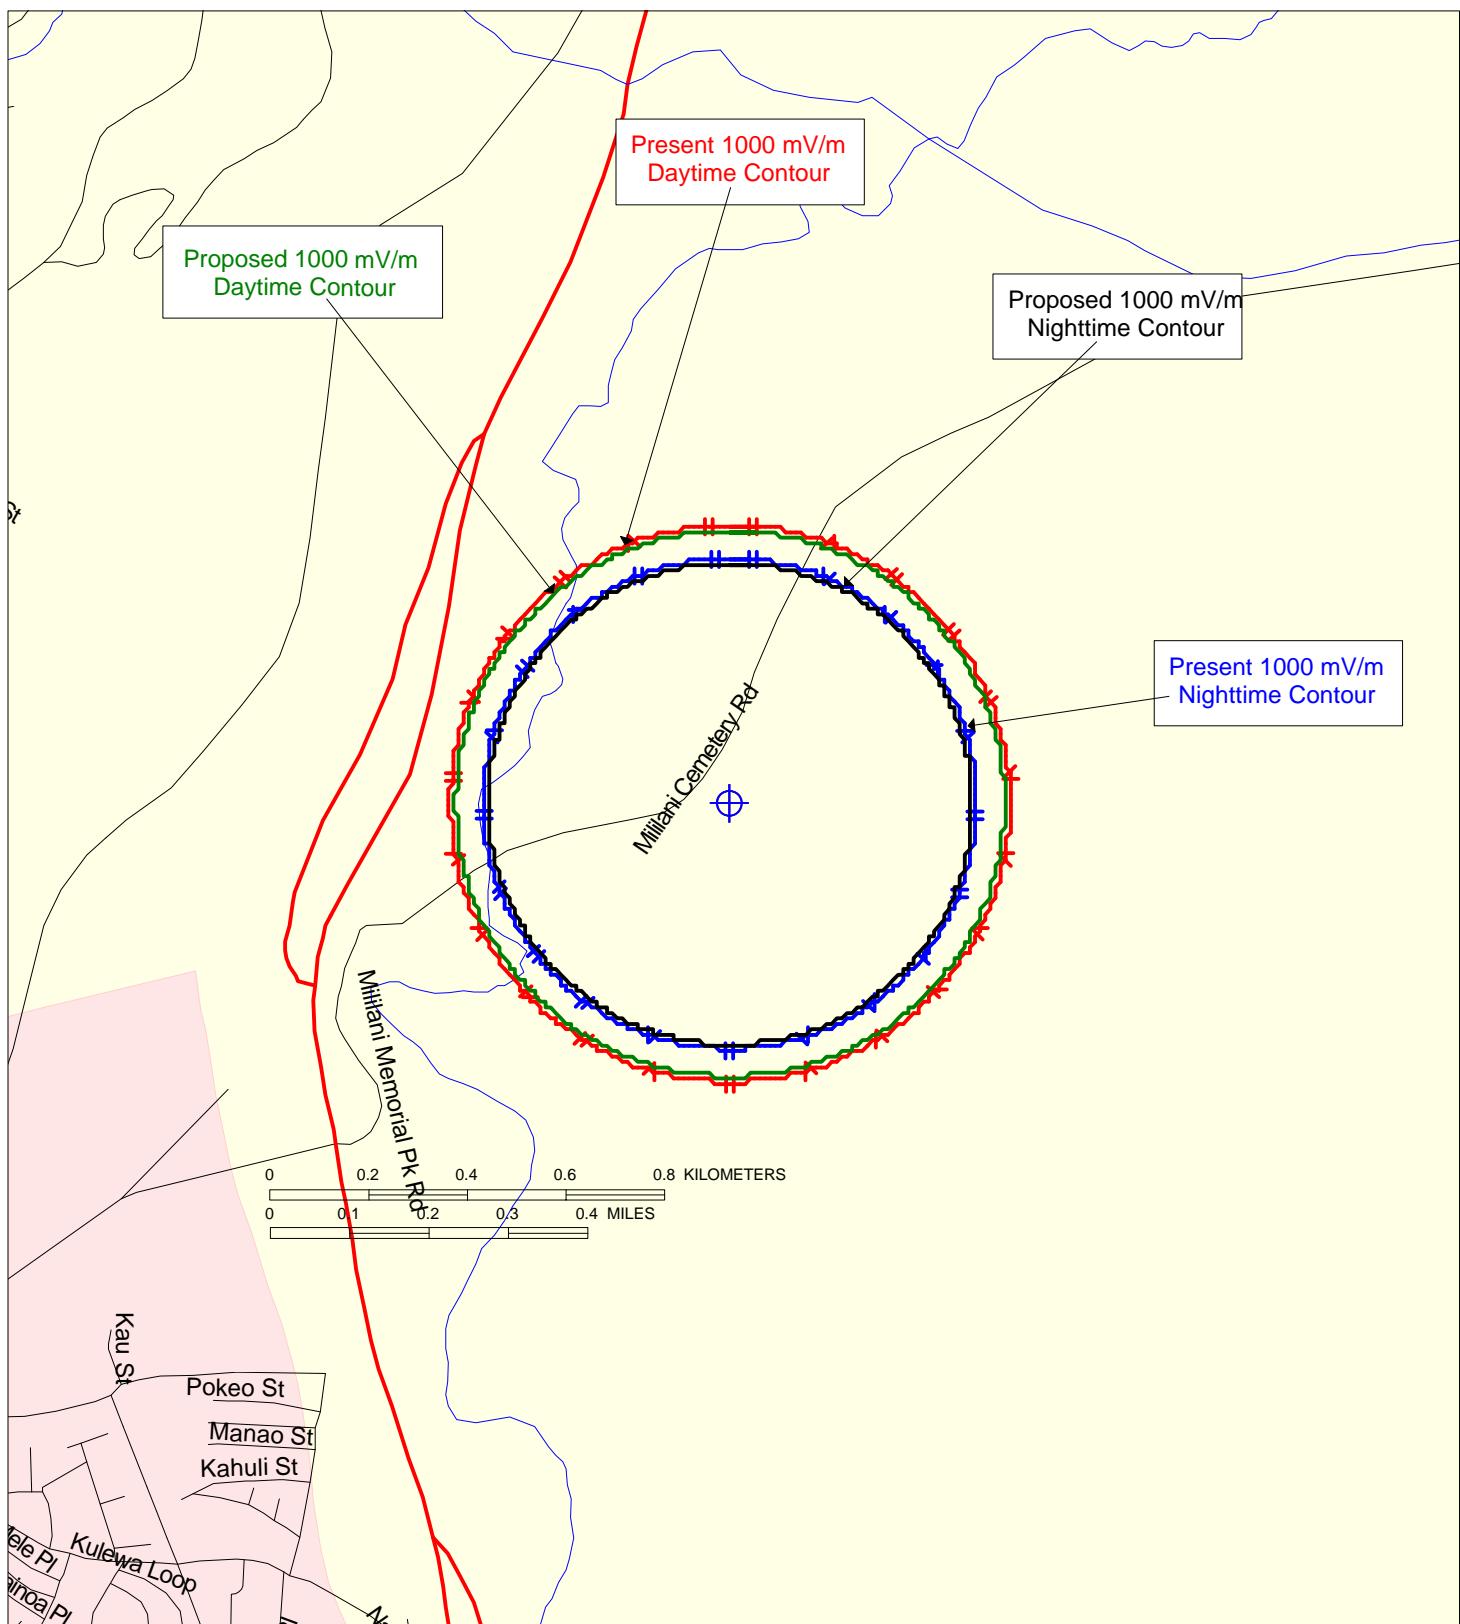

It is submitted that the proposed technical facilities described herein comply with the technical standards of the Commission's Rules and Regulations.

This statement, Section III-A of FCC Form 301, and the attached exhibits were prepared by me or under my direct supervision, and are believed to be true and correct, under penalty of perjury.
