

Barry O'Connor
Broadcast Engineering

The proposed facility referenced in the construction permit I.D. 85911 - FCC FILE number BMPED - 20040825ABH - has been constructed.

I have supervised and monitored all of the construction of the KBXO transmitter site with the directional antenna system.

The Propagation Systems, Inc. model PSI FM L-1-DA on a 4" diameter mast directional antenna system was installed exactly as specified by it's manufacturer. The antenna orientation, as specified

in the construction permit, has been measured and verified by a licensed survey engineer licensed in the state of California. The survey certification is attached as an exhibit.

I certify, under penalty of perjury, that I am a Broadcast Engineer and am familiar with all relevant F.C.C. regulations that pertain to this project. I have 36 years experience in audio electronics and 23 years experience in broadcast engineering.

I have a two (2) year degree in electronic communications at San Diego City College.

I have designed, built, and rebuilt many transmitter site systems.
