

Engineering Exhibit  
License Application  
CP: BXPB-20050105ABQ

WDRM Facility ID No. 44024

July 6, 2005

The construction permit for this facility, BXPB-20050105ABQ, contains as special condition (1), requirements with regard to standard band radio stations WDJL and WLOR. This condition is for compliance with Section 73.1692.

Station WDJL is located 2.64 km from the WDRM site. WDJL is no longer a directional facility and as such is not subject to 3.2 km spacing pursuant to 73.1692, but the 0.8 km non-directional distance. WDJL has applied via license application BL-20050214AHS to operate the non-directional facility granted in Construction Permit, BP-20010808AAP. Attached as Figure 1 are current photographs showing the now empty tower bases that once supported elements of the WDRM directional array, as well as the one remaining non-directional tower. Because WDRM and non-directional WDJL are more than 0.8 km spaced, Special Condition 1 with regard to WDJL has been complied with.

Station WLOR licensed directional facility is located over 6 km from WDRM, it is therefore assumed the permit condition must apply to construction permit BP-20021017AAQ which specifies a location 3.18 km from WDRM. The facility contemplated in the WLOR permit does not exist, nor is it under construction. Attached as Figure 2 are current photographs showing the parcel of land associated with the location described in BP-20021017AAQ which show only empty land with no present structures, construction equipment, or supplies. Because WDRM is not located within 3.2 km of a constructed directional facility of WLOR, Special Condition 1 with regard to WLOR has been complied with.

Due to the foregoing, special condition or restriction 1 has been complied with.

Respectfully Submitted

Troy G. Langham  
FCC Engineering Supervisor
