

EXHIBIT 12

Waiver Request of Section 74.1204

Mina, SD K201HB 115 Watts ERP

Calvary Chapel of Twin Falls, Inc. 3/06

The proposed site is contained entirely inside the service contour of second-adjacent FM Translator station Aberdeen, SD K205ED

Please note that simultaneous with this filing, K205ED, Aberdeen an application is being submitted for modification to channel 207.

K205ED

The proposed site is contained entirely inside the service contour of second-adjacent FM Translator K205ED, Channel 205, Class D, .25kW, Aberdeen, SD. The level of least arriving protected F(50,50) signal at the proposed transmitter site is in excess of 180-dBu because these two stations are using the same transmit antenna. Using the Undesired-to-Desired method for calculating proposed interference, the interfering contour with respect to K205ED is in excess of 220-dBu (free-space contour method employed). The interfering signal would, in the worst case at the maximum radial, extend less than 1 meter from center of radiation, which already exists at 60 meters AGL and will not be changed. This interfering contour does not touch the ground. Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel K205ED.
