ENGINEERING REPORT
K247CP, Houston, TX, Channel 247D FM Translator Application

ENGINEERING STATEMENT

All required protections are met by contour non-overlap pursuant to Section 74.1204, with the exception of protection to K245CQ, Houston, TX 245D (as licensed) and KBXX, Houston, TX 250C. K245CQ and KBXX are protected, as discussed below.

PROTECTION TO K245CQ AND KBXX

K245CQ 245D (10.2 kilometers at 117 degrees True from translator site) and KBXX 250C (19.3 kilometers at 188 degrees True from translator site) are second/third adjacent-channel stations to the proposed channel 247 translator facility. The 60 dBu F50,50 service contour of both K245CQ (as licensed) and KBXX extend beyond the 247D transmitter site. Using the well-established *Living Way Ministries* Methodology, no actual interference to any population is predicted to exist to K245CQ or KBXX.

Note that a rule waiver of Section 74.1204 for this second and third adjacent-channel protection using the well-established *Living Way Ministries* Methodology is respectfully requested if such a rule waiver is deemed necessary for protection to any station.

The F50,50 signal strength from K245CQ (as licensed) at the proposed 247D transmitter site is greater than 63 dBu (the “desired” signal of K245CQ). (Not that the CP facility BPFT-20170717AAH’s 60 dBu contour does not overlap with the proposed 247D transmitter site; and the CP facility of K245CQ is fully protected.) The F50,50 signal strength from KBXX at the proposed 247D transmitter site is greater than 94 dBu (the “desired” signal of KBXX). The second/third adjacent-channel protection is an undesired-to-desired (“U/D”) dB signal strength ratio of 40:1. Therefore, predicted interference to K245CQ or KBXX is a 247D signal of greater than or equal to 103 dBu.

The 103 dBu signal based on a free space field determination is predicted to extend out to 788 meters from the proposed 247D transmitter antenna. Figures EE1 and EE2, attached, are aerial photos of the proposed site and surrounding area that show: (a) the antenna will be mounted at the very western point of the roof-top of the building (at 5847 San Felipe); and (b) there are no tall buildings within 788 meters to the West of the proposed antenna where the Scala CL-FM antenna will serve.

ENGINEERING REPORT

K247CP, Houston, TX, Channel 247D FM Translator Application

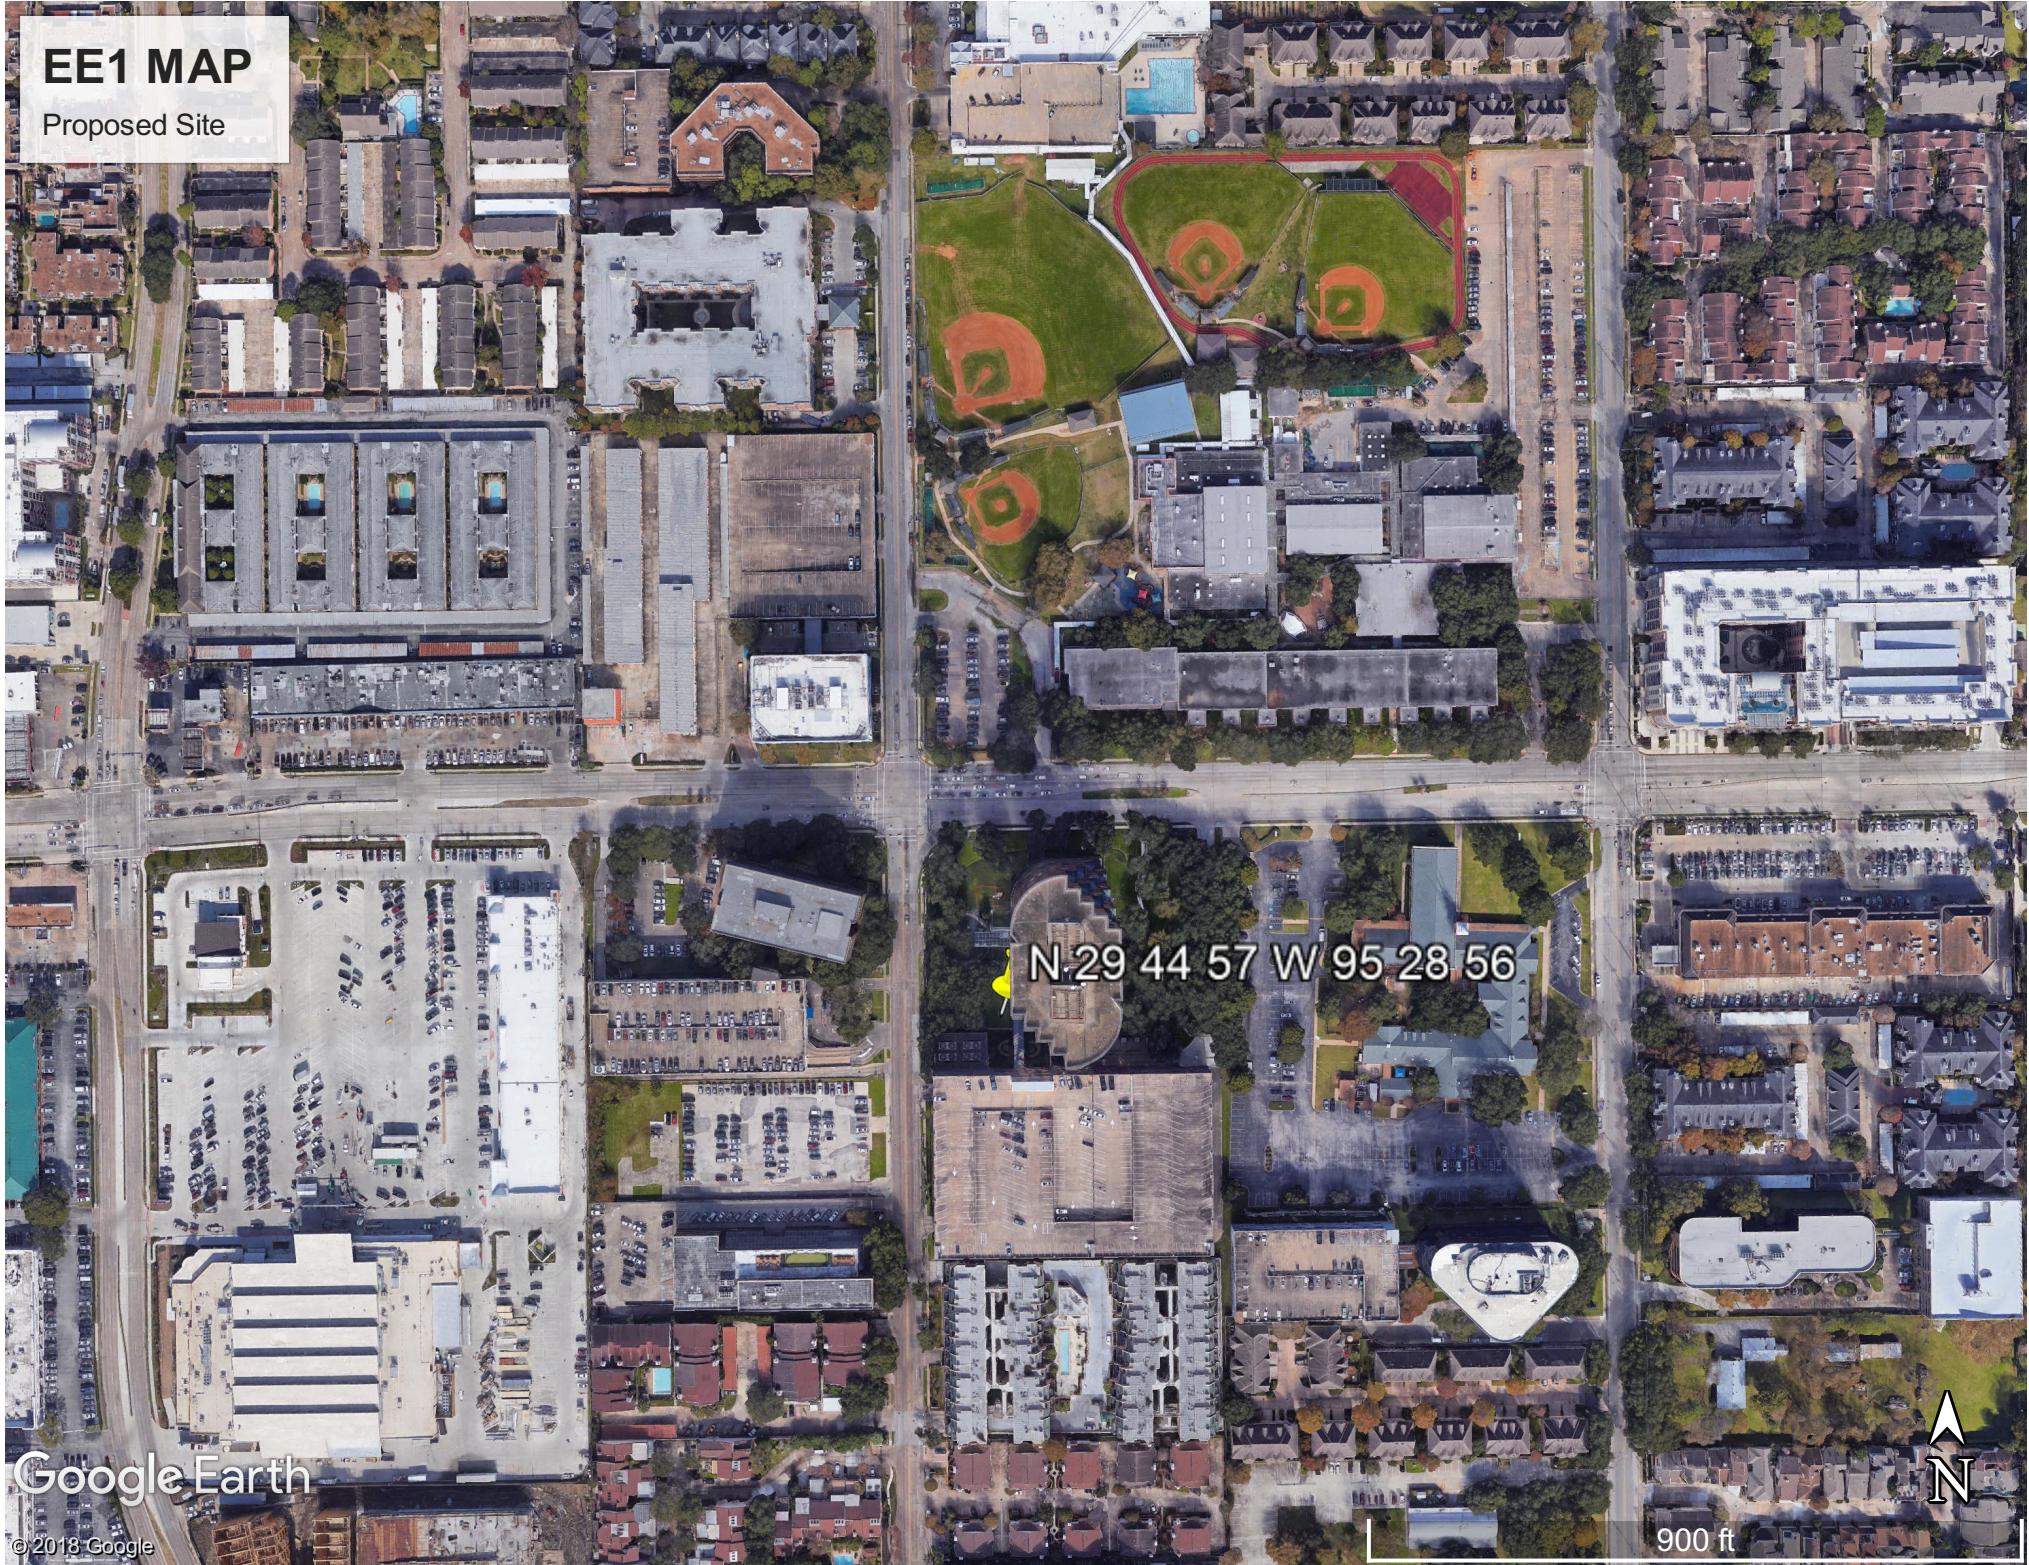

Attached is a vertical plane pattern of the proposed Scala CL-FM(H) three-bay (half-wave spaced) antenna. Also attached is a table with the results of a Section 74.1204 analysis (using the FCC-requested spreadsheet). From the tabulation, the possible 103 dBu contours extends no closer than 38 meters above ground level within the study distance of 788 meters. The tallest building to the West of the transmitter site and within 788 meters of the building is 37 meters tall. Therefore, all buildings within the target study distance of 788 meters are fully protected.

The three-bay antenna will be installed to extend one foot over the edge of the building on the western edge of the building. The relative field of the Scala CL-FM antenna extending over the building will be 0.01 in all such vertical azimuths. The 103 dBu FSL signal will extend to a maximum distance of 8 meters in any direction on the building. Since the highest floor of the building is at least 18 meters below the proposed antenna, no persons on the building will be impacted.

Therefore, pursuant to Section 74.1204(d) of the FCC Rules, K245CQ and KBXX are adequately protected by the proposed facility.
