WCBS-FM FCC 301 Application  
Section III-B Environmental  
Infinity Broadcasting Operations Inc.  
April 19, 2001

Infinity Broadcasting Operations Inc., the licensee of WCBS-FM, New York, NY, proposes to install an auxiliary antenna, located at geographic coordinates 40° 45' 27.6" North Latitude, 73° 59' 11.5" West Longitude (NAD27), using an ERI model SHP 4AC antenna, 1/2 wavelength spacing. In addition, an application is being filed for WXRK(FM) to utilize the same antenna for its auxiliary antenna. The proposed combined ERP for both stations is 26.5 kW H & V at a center of radiation 226 meters above ground level (AGL). An analysis has been made of the human exposure to NEIR using the calculation methodology described in OET Bulletin 65, Edition 97-01, prepared by the FCC Office of Engineering and Technology. The proposed antenna will be mounted on a 20 ft. pole attached to an elevated corner section of the building roof structure. Access to the roof of the building is restricted and signs are in place notifying of the potential for REF emissions in excess of the MPE for General Population.

At the conclusion of installation, Infinity Broadcasting Operations Inc. will take appropriate measurements to document any areas that may exceed the MPE for Occupational/Controlled environment when the auxiliary antenna is in use and provide this information to any worker gaining access to the roof of the building.

If work is done on or near the antenna structure or in an area where over exposure could occur, the licensees will take necessary action to prevent the overexposure of workers including reducing transmitting power or ceasing operation completely.

The instant proposal is categorically excluded from environmental processing since none of the conditions of Sections 1.1306(b)(1), (2), or (3) of the FCC Rules would be involved for the following reasons:

1. The proposed auxiliary antenna facility will utilize an existing supporting structure that is not in or near any location referenced in Section 1.1306(b)(1) of the FCC Rules as being of environmental interest.
2. The provision of Section 1.1306(b)(2) of the FCC Rules relating to the use of high-intensity strobe lighting does not apply since no change in the existing lighting is proposed.

Finally, with regard to RFR exposure concerns, compliance with applicable FCC MPE limits would be achieved.
