

**Exhibit for Modification to  
Construction Permit BMPFT-20060201AKU**

K291AV, North Enid, OK, Facility ID -140182 Educational Media Foundation

This facility proposes to move its antenna from a radiation center of 62 meters to 77 meters on its previously granted CP tower site. This is an existing tower that is located nearby to KCRC-AM 1390 kHz, Enid, OK. Specifically, K291AV proposes to re-locate their antenna on an already existing tower (ASRN - 1236261) that is 2.6 meters from the KCRC array.

This exhibit addresses the possibility that should the FCC grant the facility contemplated herein, that a Special Operating Condition will be attached to the construction permit, which would deal with the potential adverse affects to the array of AM station KCRC. Typically, these conditions would require a partial proof of performance on KCRC be conducted both before and after construction of the facilities authorized by the construction permit. We believe that this condition would be unnecessary, as the antenna for the translator is to be mounted on an existing tower, and is therefore unlikely to have any significant affect on the AM station's array.

More recent construction permits for FM translators have updated AM proximity conditions such as the following:

*If the antenna is mounted on an existing tower that is not base-insulated or detuned at the AM frequency, the permittee shall submit a certification to this effect.*

We certify that the antenna for K291AV is proposed to be mounted on a pre-existing grounded steel tower, and respectfully request that no condition for a partial proof be placed on the construction permit.

Respectfully submitted,

Michelle Hosier
